# **Scheme and Syllabus**

of

B. Tech.

# Electronics and Communication Engineering

(2024-2025 onwards)

**Offered by:** 

# Department of Electronics & Communication Engineering

# NATIONAL INSTITUTE OF TECHNOLOGY DELHI

# Delhi-110036

(An autonomous Institute under the aegis of Ministry of Education, Govt. of India)

\*Approved in the 3<sup>rd</sup> Meeting of Board of Studies of the Dept. of ECE, held on February 23, 2024 and in line with the recommendation of the Honourable Senate in the 17<sup>th</sup> Senate Meeting held on May 30, 2024.

#### Department of Electronics and Communications Engineering National Institute of Technology Delhi

#### **1.1 About the Department**

Welcome to the Department of Electronic and Communication Engineering (ECE), National Institute of Technology Delhi. It was established in 2010, immediately with the beginning of the Institute under the aegis of the Ministry of Human Resource and Development (MHRD), Govt. of India. Currently, Department is offering one Undergraduate Program as B. Tech (ECE) and two Postgraduate programs as M. Tech. ECE and M. Tech. ECE (VLSI). The Department also offers Ph.D. and Post-Doctoral Fellowship (PDF) Programme in relevant areas. It has excellent laboratories and research facilities in electronic devices and circuits, electronic measurement and instrumentation, microprocessor and microcontroller, microwave and antenna design, optical fiber communication and optical device, multimedia, and advanced communication and design automation and simulation laboratory. The Department has received projects, grants, and fellowships from the Ministry of Electronics and Information Technology (MeitY), the Department of Science and Technology (DST)-SERB, and other funding agencies. The Department has active collaborations with academic Institutes & research institutes in India and abroad.

The Department of ECE has a blend of young as well as experienced dynamic faculty members and is committed to providing quality education and research in the field. Faculty members of the department have excellent academic & research credentials and published numerous peer-reviewed journal articles/papers, Books, Book Chapters, etc. in the diversified field and have adequate experience in advanced research. The department of ECE provides a creative learning environment to the students for excellence in technical education. Here the students learn to face the challenges related to emerging technologies in electronics and communication engineering. The department of ECE promotes a self-learning attitude, entrepreneurial skills, and professional ethics. The department hopes to achieve the national goals and objectives of industrialization and self-reliance. As a result, it hopes to produce graduates with strong academic and practical backgrounds so that they can fit into the industry immediately upon graduation.

#### 1.2 Vision

Create an educational environment to prepare the students to meet the challenges of the modern electronics and communication industry through state of art technical knowledge and innovative approaches beneficial to society

#### 1.3 Mission

- To promote teaching and learning by engaging in innovative research and by offering state-ofthe-art undergraduate, postgraduate, and doctoral programs.
- To cultivate an entrepreneurial environment and industry interaction, leading to the emergence of creators, innovators, and leaders.
- To promote co-curricular and extra-curricular activities for the overall personality development of the students.
- Building of responsible citizens through awareness and acceptance of ethical values.

#### **B.** Tech. in Electronics and Communication Engineering

#### 2.1 Preamble

**B. Tech.** (Electronics and Communication Engineering) program offered at NIT Delhi is designed to equip students with a unique blend of skill sets that include:

- Strong theoretical foundation
- Predominantly practice-oriented approach with access to well-equipped and specialized laboratories, and supervised internship via the Practice School
- Hands-on technical training
- Life skills orientation
- Hard and soft skills
- Business perspective, along with emphasis on innovation and entrepreneurship

#### 2.2 Salient Features

- Minimum Credits requirements for completion of B. Tech. program are 160.
- The Curriculum is based on the guidelines of National Education Policy (NEP) 2020.
- The curriculum has embedded the Multi Exit/ Multi Entry in the B. Tech. program.
- There is provision of Major degree and Minor Degree for students.
- The curriculum is designed to meet the prevailing and on-going industrial requirements.
- The curriculum includes Project based Education with Projects every year.
- The curriculum is flexible and offers Choice Based Credit System (CBCS).
- The curriculum inherits the Value based Education and offers Interdisciplinary/ Multidisciplinary Courses.
- The Curriculum offers Digital Pedagogy & Flipped Learning with adequate motivation for Entrepreneurship/ Startups.
- The curriculum aims the Holistic Development of the students.

#### 2.3 Cardinal Mentions

- Students exiting after completing 1st Year, 2nd Year and 3rd Year will be awarded Certificate, Diploma and Advanced Diploma in Electronics Engineering respectively. A minimum Credit requirement for Certificate is 40 Credits, Diploma is 80 Credits and Advanced Diploma is 120 Credits respectively.
- The students can opt for Minor Degree across any specialization offered in the Institute from 5<sup>th</sup> Semester e.g. a student pursuing B. Tech. (Electronics and Communication Engineering) may opt for Minor Degrees offered by the different Departments in the Institute depending upon his/her interest.
- The students opting for Minor Degree will have to earn additional credits for the Minor Degree as per Institute norms which may vary from time to time.

## 2.4 Program Educational Objectives (PEOs)

| PEO-1 | Engineering Graduates will excel in Electronics & Communication fields both in the industry and academics by analyzing and applying their knowledge in a professional manner. |
|-------|---|
| PEO-2 | Demonstrate multi-disciplinary knowledge and skills to analyze, interpret and create solutions to the real-life electronics engineering problems.                             |
| PEO-3 | Embrace capability to expand horizons beyond engineering for creativity, innovation and entrepreneurship.   |
| PEO-4 | Imbibe competence and ethics for social and environmental sustainability with a focus on the welfare of humankind.  |

### 2.5 **Program Outcomes (POs)**

| PO-1  | <b>Engineering Knowledge</b> : Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.   |
|-------|--|
| PO-2  | <b>Problem Analysis:</b> Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.   |
| PO-3  | <b>Design/Development of Solutions:</b> Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations          |
| PO-4  | <b>Conduct Investigations of Complex Problems:</b> Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.  |
| PO-5  | <b>Modern Tool usage:</b> Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.   |
| PO-6  | <b>The Engineer and Society:</b> Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.   |
| PO-7  | <b>Environment and Sustainability:</b> Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.   |
| PO-8  | <b>Ethics:</b> Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.  |
| PO-9  | <b>Individual and Team Work:</b> Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.   |
| PO-10 | <b>Communication:</b> Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions. |
| PO-11 | <b>Project Management and Finance:</b> Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.   |
| PO-12 | <b>Life-long learning:</b> Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.   |

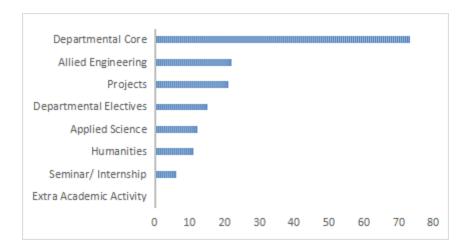

## 2.6 Program Specific Objectives (PSOs)

| PSO -1 | Capability to analyze the problems and develop solutions in the area of Electronics and Communication.                         |
|--------|--|
| PSO -2 | An ability to make use of acquired technical knowledge for a successful career, contribution to research and entrepreneurship. |

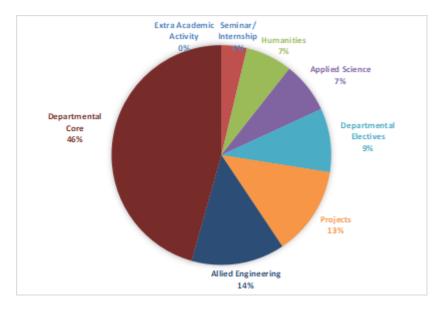

#### 3.1 Semester wise Credit Structure

| Sl.<br>No. | Category of<br>Courses  | 1 <sup>st</sup> 1 | Year      | 2 <sup>n</sup> | <sup>d</sup> Year | 3 <sup>rd</sup> | Year        | 4 <sup>th</sup> Y | lear        | Total |

| Course                | UNIT I:  |  |  |  |  |  |  |  |  |
|                       | Semiconductor Devices: Conductivity of insulators, metals, and semiconductors<br>in terms of energy bands, the chemical bond in Si and Ge, conductivity of intrinsic<br>semiconductors, extrinsic semiconductors: n-type and p-type semiconductors, Hall<br>Effect in semiconductors, Mechanism in current flow: drift and diffusion, Einstein<br>relation, semiconductor materials: Element semiconductor, II-VI compound, III-V<br>compounds, ternary and quaternary compounds. V-I characteristics of PN-junction<br>diode. Diode equivalent circuit, diode as a switch, diode testing.12   |  |  |  |  |  |  |  |  |
|                       | <b>UNIT II:</b><br>Diode Applications: Rectifiers: Half wave, centre tapped and bridge full-wave,<br>Zener diode regulator and voltage multiplier, clipping and clamping circuits.   |  |  |  |  |  |  |  |  |
|                       | UNIT III:  |  |  |  |  |  |  |  |  |
|                       | Electrical Circuit Analysis: Voltage and current sources, dependent and independent sources, source conversion, DC circuit's analysis using mesh & nodal method, Thevenin's& superposition theorem, star-delta transformation. 1-phase AC circuits under sinusoidal steady-state, active, reactive, and apparent power, physical meaning of reactive power, power factor, 3-phase balanced and unbalanced supply, star and delta connections.  |  |  |  |  |  |  |  |  |
|                       | UNIT IV:   |  |  |  |  |  |  |  |  |
|                       | <b>UNIT IV:</b><br>Electrical Machines (Static & Dynamic): Transformers: Magnetic Circuits:<br>Review of laws of electromagnetism, Flux, MMF and their relation, analysis of the<br>magnetic and electric circuit. Single-phase transformer: Basic concepts,<br>constructional features, EMF equation, voltage, current, and impedance<br>transformation, Equivalent circuits. Electrical Machines: DC Machines:<br>Constructional features, working principle, emf equation, types of dc machines,<br>and their characteristics. Induction Machines: Constructional features, working<br>principle, emf equation, the concept of slip and torque–slip characteristics.<br>Synchronous Machines: Constructional features, working principle and emf<br>equation. |  |  |  |  |  |  |  |  |

| Tentative L | ist of Experiments  |
|-------------|---|
| S. No.      | Experiments   |
| 1.          | Introduction to Breadboard and Electronics components/ Equipment Task.                      |
| 2.          | Multimeter Operation, Colour Coding of Resistance and capacitor coding                      |
| 3.          | Study of Cathode Ray Oscilloscope (CRO)   |
| 4.          | Study of Digital Storage Oscilloscope (DSO)   |
| 5.          | Light a bulb/LED and its brightness control   |
| 6.          | Series/ Parallel Connection of resistors and Water Level detector                           |
| 7.          | Slow light up of LED - Series/ Parallel Connection of Capacitors and build your own battery |
| 8.          | One-way current using diode and One-way Light Bulbs LED's                                   |
| 9.          | The Electronic Switch- using Transistor   |
| 10.         | THE LIGHTHOUSE- LED blinking  |
| 11.         | a) Breadboard to PCB – PCB Introduction   |
|             | b) To learn how to solder and de- solder  |
| 12.         | Study of Resonance in Series RLC Circuit and to find its resonance frequency.               |
| 13.         | Study of Resonance in Parallel RLC Circuit and to find its resonance frequency.             |
| 14.         | Study of characteristics of PN Junction Diode   |
|             | a) Forward bias   |
|             | b) Reverse bias   |

| Exp. No. | Name of Experiments   |
|----------|---|
|          | INTRODUCTION TO PRODUCT DESIGN  |
| 1.       | To study different tools used in SolidWorks.  |
| 2.       | 2D and 3D part design in SolidWorks.  |
|          | FITTING SHOP  |
| 1.       | To study about different hand tools used in fitting shop.                                       |
| 2.       | To make a V-Fit from the given mild steel pieces with specified dimensions.                     |
| 3.       | To make a square fit from the given mild steel pieces with specified dimensions                 |
|          | MACHINE SHOP  |
| 1.       | To study of different parts of Lathe machine.   |
| 2.       | To perform turning and grooving operations on the given work piece in lathe machine.            |
| 3.       | To perform facing, knurling, thread cutting operations on the given work piece in lathemachine. |
|          | FOUNDRY SHOP  |
| 1.       | To study the different tools used in Foundry shop.  |
| 2.       | To prepare a pattern and moulding box for bench moulding process and sand mouldcasting in       |
|          | Foundry Shop.   |
| 3.       | To determine the green shear strength of the given specimen for different percentages of clay   |
|          | and moisture.   |
|          | WELDING SHOP  |
| 1.       | To make a lap joint of the given mild steel pieces by arc welding.                              |
| 2.       | To make a butt joint of the given mild steel pieces by arc welding.                             |
| 3.       | To make a T joint of the given mild steel pieces by arc welding.                                |
|          | SHEET METAL SHOP  |
| 1.       | To study different types of Hand tools used in Sheet metal shop.                                |
| 2.       | To prepare a square tray of given dimensions using a Galvanized iron (G.I) sheet.               |
| 3.       | To prepare a Funnel of given dimensions using a G.I. sheet.                                     |
|          |   |

#### **Course Contents**

#### Unit I

Introduction: Organization and Organizational Behavior- Concept and significance, Organizational Structures, Individual & Group Behavior; Morals, Values and Ethics; Engineering Ethics- Need, Scope, and Approach; Personality- meaning and definition, Types of Personality; Personality Attributes; Determinants of Personality- Biographical and Personal factors, Environmental Factors, Psychological Factors; Big Five Personality traits.

#### Unit II

Feelings, Classification of Feelings; Dimensions of Emotions, Emotions and External Constraints; Emotional Intelligence; Spiritual Intelligence; Authority, Responsibility and Accountability: Meaning of Authority, Responsibility and Accountability, Balance between Authority, Responsibility and Accountability.

#### Unit III

Moral Development; Variety of Moral Issues; Moral Dilemma; Moral Autonomy; Theories of Moral Development- Cognitive Moral Development; Concept of moral Relativism and Moral Imperialism; Encouragement and Approaches to Ethical Behavior.

| <b>Course Contents</b> | UNIT I:   | 10 |
|------------------------|---|----|
|                        | Introduction: KCL, KVL, Network theorems and its application in the           |    |
|                        | analysis of networks.   |    |
|                        | UNIT II:  | 15 |
|                        | Network Functions and Response Analysis: Concept of complex frequency,        |    |
|                        | driving point and transfer functions for one port and two port network, poles |    |
|                        | & zeros of network functions, Restriction on Pole and Zero locations of       |    |
|                        | network function, Impulse response and complete response, Time domain         |    |
|                        | behavior form pole-zero plot, Two port parameters, relationships among        |    |
|                        | different network parameters, inter connections of networks.                  |    |
|                        | UNIT III:   | 11 |
|                        | Poly-Phase Circuits: Introduction to polyphase system, Generation of three-   |    |
|                        | phase voltages, Interconnection of 3 phase sources and loads, Star-to-Delta   |    |
|                        | and Delta-to-Star transformation, Voltage, current and power in a star and    |    |
|                        | delta connected system, three phase balanced and unbalanced circuits.         |    |
|                        | UNIT IV:  | 12 |
|                        | Network Synthesis: Realizability concept, Hurwitz property, positive          |    |
|                        | realness, properties of positive real functions, properties of one port       |    |
|                        | immittance functions and their synthesis, Foster and Cauer forms, RLC         |    |
|                        | synthesis, Introduction to two-port network synthesis.                        |    |
| Course                 | Continuous Evaluation 25%   |    |
| Assessment             | Mid Semester 25%  |    |
|                        | End Semester 50%  |    |

| 4.                | Adel S. Sedra and Kenneth C. Smith, Microelectronic Circuits, International Stu<br>Edition, Oxford University Press, 2006.  | Ident |
| Course Contents   | <b>UNIT I:</b><br>Transistor biasing and basic characteristics: Operating point, Bias stability, Different biasing arrangements, stabilization, Thermal runway and thermal stability, Small signal low frequency amplifiers, analysis of generalized amplifier models, Transistor hybrid models, Determination and measurement of h-parameters, analysis of transistor amplifier circuits using h- parameters.  | 08    |
|                   | <b>UNIT II</b> :<br>Low frequency response of amplifiers and Large Signal Amplifier: Cascading transistor amplifiers, calculations for different amplifier configurations, Emitter follower, Miller's theorem, Cascode transistor configurations, few configurations of high frequency response, Basic overview on difference and power amplifiers, a) Difference between voltage and power amplifiers b) Importance of impedance matching in amplifiers c) Class A, Class B, Class AB, and Class C amplifiers d) Single ended power amplifiers, push-pull amplifier, and complementary symmetry push-pull amplifier.   | 12    |
|                   | <b>UNIT III:</b><br>Feedback and operational amplifiers and Sinusoidal Oscillators: Feedback concept, positive and negative feedback, different feedback configurations, Introduction to operational amplifiers: The difference amplifier and the ideal operational amplifier models, concept of negative feedback and virtual short; Analysis of simple operational amplifier circuits; Effects of real operational amplifier parameters on circuit performance. Linear applications of operational amplifiers: Instrumentation and Isolation amplifiers; Current and voltage sources; Active filters. Nonlinear applications of operational amplifiers. Barkhausen criterion for oscillations, Different oscillator circuits-tuned collector, Hartley Colpitts, phase shift, Wien's bridge, and crystal oscillator.   | 14    |
|                   | UNIT IV:<br>Multistage Amplifiers and Power Supplies: Need for multistage amplifier, Gain of<br>multistage amplifier, Different types of multistage amplifier like RC coupled,<br>transformer coupled, direct coupled, and their frequency response and bandwidth,<br>Output stage and large signal amplifiers, Power amplifiers, Tuned amplifiers.<br>Wave Shaping Circuits General idea about different wave shapers, RC and RL<br>integrating and differentiating circuits with their applications, Multivibration<br>Circuits, Concept of multi-vibrator: Block diagram of IC555 and its working,<br>IC555 as monostable and astable multi-vibrator. Regulated DC Power Supplies:<br>Concept of DC power supply. Line and load regulation, Concept of fixed voltage,<br>IC regulators (like 7805, 7905), and variable voltage regulator like (IC 723),<br>SMPS. | 14    |

| Course     | UNIT I:   |   |    |  |  |  |  |
| Contents   | transmission media, conce<br>usage, Review of Signal re<br>Introduction to Noise: Att<br>figure and experimental de   | to communication systems, guided and unguided<br>ept of bandwidth, electromagnetic spectrum and its<br>presentation using Fourier Series & Fourier Transform.<br>mospheric, Thermal, Shot and Partition noise, Noise<br>etermination of noise figure, Shot noise in temperature<br>arge limited diodes, Pulse response and Digital noise. | 12 |  |  |  |  |
|            | <b>UNIT II:</b><br>Analog Modulation Techniques: Introduction and need of modulation, Theory of Amplitude Modulation; Amplitude modulation, DSB, SSB, (with and without carrier), VSB, Power Calculations, Generation of AM. Theory of Frequency Modulation (FM); FM and PM, Transmission FM spectra, Carson's rule, Bandwidth of FM, reactance FET modulator Armstrong method, Foster-Seely discriminator, PLL detector, Stereophonic FM, Narrow band and wide band FM. Comparison of FM and PM. |   |    |  |  |  |  |
|            |   | dio frequency receiver, Super heterodyne receiver,<br>y, selection of IF. Block diagram and features of<br>nd its spectral features.  | 12 |  |  |  |  |
|            |   | ssion and Reception: Sampling Theorem–low pass and<br>e Modulation (PAM), Pulse Time Modulation (PTM);<br>PWM).   | 12 |  |  |  |  |
|            | Tentative List of Experiments:1. Study of AM Modulation/Demodulation.2. Study of FM Modulation/Demodulation.3. Study of Diode detector and AGC.4. To study Sampling theorem.5. Sensitivity of a superheterodyne Receiver.6. Selectivity of a superheterodyne Receiver.7. Fidelity of a superheterodyne Receiver.8. Study of Pulse Amplitude Modulation/Demodulation.9. Study of Pulse Width Modulation/Demodulation.10. Study of Pulse Position Modulation/Demodulation.                          |   |    |  |  |  |  |

| Course   | UNIT I:   |    |
|--|---|----|
| Contents   | Introduction MOSFET, threshold voltage, current, Channel length modulation, body<br>bias effect and short channel effects: drain-induced barrier lowering, velocity<br>saturation, hot carrier effect, MOS switch, MOSFET capacitances, MOSFET models<br>for calculation- Transistors and Layout, CMOS layout elements, parasitics, design<br>rules, Lambda based design rules, layout design, SPICE simulation of MOSFET I-V<br>characteristics. Body effect, Latch up in CMOS circuits, Scaling and its types for<br>MOS devices.   | 12 |
|  | <ul> <li>UNIT II:<br/>CMOS inverter, static characteristics, noise margin, Dynamic Characteristic, Power, propagation delay equations and parameters. Static and dynamic power dissipation, energy &amp; power delay product, pull up and pull-down concept, CMOS based gate design NAND, NOR, XOR, XNOR, Transistor sizing, BiCMOS inverter. Pseudo NMOS inverter and logic design.</li> <li>Combinational MOS Logic circuits: Static CMOS Design – Complementary CMOS, Complex logic circuits, Ratioed Logic, Pass-Transistor Logic, Transmission gate-based design, Logic design with transmission gate concept.</li> </ul>  | 12 |
|  | <b>UNIT III:</b><br><b>Sequential circuit design:</b> Behaviour of Bistable element, SR Latch Circuit, Clocked Latch and Flip-Flop Circuits, Clocked JK latch, CMOS D-Latch and Edge-Triggered Flip-Flops, Master slave DFF, dynamic CMOS design, speed and power considerations, Domino logic and its derivatives, Voltage Bootstrapping, C2MOS, NORA CMOS, Zipper CMOS circuits, TSPC registers.  | 12 |
|  | <b>UNIT IV:</b><br>CMOS adder design, Schmitt triggers circuit, Clocking and clock schemes, CMOS memory design-SRAM and DRAM. DRAM cell types, SRAM cell types, Overview of Power Consumption, Introduction to Low-Power Design approaches, Switching power dissipation, short circuit power dissipation, leakage power dissipation.  | 12 |
| List of<br>experiments of<br>VLSI Design<br>Laboratory | <ol> <li>To study the NMOS and PMOS Drain and Gate characteristics.</li> <li>To design and study the DC characteristics of resistive inverter.</li> <li>To design and study the transient and DC characteristics of CMOS inverter.</li> <li>To design and study the output characteristic of BiCMOS inverter.</li> <li>To design and study the characteristics of CMOS NAND gate</li> <li>To design and study the characteristics of CMOS NOR gate.</li> <li>To design and study the transient characteristics of CMOS XOR gate.</li> <li>To design and study the characteristics of CMOS based multiplexer.</li> <li>To design and study the characteristics of CMOS based multiplexer.</li> <li>To design and study the characteristics of CMOS based D Flip Flop.</li> <li>To design and study the characteristics of Schmitt trigger circuit.</li> <li>To design and study the characteristics of VCO circuit.</li> </ol> |    |

| Content |  |
|---------|--|
|         |  |

Electromagnetic Spectrum, Introduction, characteristic, features and applications of microwaves, Microwave Region and Band Designation, Advantage of microwaves matrix: Z, Y, h, ABCD Parameters-Cascaded networks, Circuit and S parameter representation of N port microwave networks, properties of S-matrix, Reciprocity Theorem- Lossless networks and unitary conditions. Hybrid Circuits: T junctions -E plane tee, H-plane Tee, Magic tee, Directional Coupler, Application of Magic Tee, Rat Race Junction, Directional coupler, isolator, circulators. Transmission Lines: Introduction, Two wire parallel transmission lines, Voltage and Current Relationship in a Transmission Line, Characteristic Impedance, Reflection Coefficient, Transmission Coefficient, Input Impedance, Standing Waves, VSWR.

#### **UNIT II:**

UNIT I:

Transit time limitations: Transit time limitations in transistors, Microwave bipolar transistors, power frequency limitations microwave field effect transistors, Gunn Effect: HEMT, Gunn Effect - RWH theory, high - field domain and modes of operation microwave amplification Differential Negative Resistance, Two-Valley Model Theory. High-Field Domain, Modes of Operation, LSA Diodes, InP Diodes, CdTe Diode, Microwave Generation and Amplification.

## UNIT III:

Avalanche transit-time devices: Introduction, Read Diode, Physical Description, Avalanche Multiplication, Carrier Current Io(t) and External Current, Output Power and Quality Factor, IMPATT Diodes: Physical Structures, Negative Resistance, Power Output and Efficiency, TRAPATT Diodes, Physical Structures, Principles of Operation, Power Output and Efficiency, BARITT Diodes, Physical Description, Principles of Operation, Microwave Performance, Parametric Devices, Physical Structures, Nonlinear Reactance. Manley - Rowe Power Relations, Parametric Amplifiers, Applications.

## **UNIT IV:**

Microwave Linear Beam Tubes: Klystrons, Reentrant Cavities, Velocity-Modulation Process, Bunching Process, Output Power and Beam Loading, State of the Art, Multicavity Klystron Amplifiers, Beam-Current Density, Output Current Output Power of Two-Cavity Klystron, Output Power of Four-Cavity Klystron, Reflex Klystrons, Velocity Modulation, Power Output and Efficiency, Electronic Admittance, Helix Traveling-Wave Tubes (TWTs), Slow-Wave structures, Amplification Process, Convection Current, Axial Electric Field, Wave Modes, Gain Consideration, Microwave Crossed-Field Tubes: Magnetron Oscillators, Cylindrical Magnetron, Coaxial Magnetron, Tunable Magnetron, Ricke diagram.

#### Unit I:

#### Introduction

Management Concept and Definition, Nature of Management, Objectives of Management, Significance of Management, Managerial Roles and Managerial Skills, Management and Administration, Levels of Management, Management Process and Functions, Functional Areas of Management, Management Principles- General and Scientific Management, Evolution of Management Thought, Approaches of Management Thought.

## Unit II:

## Planning and Decision

Planning definition and nature, Importance of Planning, Planning Process, Need for Planning, Principles of Planning, Types of Planning, Advantages and Disadvantages of Planning; Decision making concept, Characteristics of Decision Making, Types of Decisions, Decision Making Process, Characteristics of Effective Decisions, Rationality in Decision Making.

## Unit III:

#### Organizing

Organizing definition. Organisation as a Process, Organisation Structure, Principles of Organisation, Importance of Organisation, Types of Organisations. Departmentation- Meaning, Need and Significance of Departments, Process involved in Departmentation, Methods or Basis of Departmentation; Span of

09

09

09

Management; Centralization and Decentralisation; Delegation.

# Unit IV

## Directing

Directing concept, Nature and Characteristics of Directing, Principles of Directing; Motivation- Concept and Theories of motivation; Concept of Leadership- Theories and Styles; Communication Process, Channels and Barriers, Effective Communication. Coordination- Concept and Nature of Coordination, Need for coordinating; Importance, Principles and Techniques of Coordination; Process of Coordination. Controlling- Definitions, Characteristics of Controlling, Steps in Control Process, Types of Controlling, Control Techniques.

| UNIT III: 05   |
|--|
| BJT modeling: Ebers Moll, Static, large-signal, small- signal models.  |
| Gummel - Poon model. Temperature and area effects. Power BJT model,  |
| SPICE models, Limitations of GP model;   |
|  |
| UNIT IV: 03  |
| Advanced Bipolar models: VBIC, HICUM and MEXTARM;  |
| UNIT V:  |
| 10   |
| MOS Transistors: LEVEL 1, LEVEL 2, LEVEL 3, BSIM, HISIMVEKV  |
| Models, Threshold voltage modeling. Punch through. Carrier velocity  |
| modeling. Short channel effects. Channel length modulation. Barrier  |
| lowering, Hot carrier effects. Mobility modeling, Model parameters;  |
|  |
| UNIT VI 08   |
| Analytical and Numerical modeling of BJT and MOS transistors:  |
| Introduction to various simulation techniques, Noise modeling; Modeling of   |
| heterostructure devices. Semi-classical Bulk Transport – Qualitative Model.  |
| Semi-classical Bulk Transport – EM field and Transport Equations. Drift-<br>Diffusion Transport Model – Equations, Boundary Conditions, Mobility and |
| Diffusion Transport Model – Equations, Boundary Conditions, Mobility and Generation / Recombination. Characteristic times and lengths, details of    |
| Energy band diagrams, Types of Device Models – MOSFET models.  |

VSWR, Open circuit transmission line, Quarter<br>wave transmission line.   |
|----------------------|---|
|                      | <b>UNIT II:</b> 08<br>Sourced and Loaded Transmission Line: Phasor representation of source, Power<br>considerations for a transmission line, input impedance matching, return loss and<br>insertion loss. The Smith Chart: Reflection coefficient in Phasor form, Normalized<br>Impedance equation, Parametric reflection coefficient equation, graphical<br>representation, Impedance transformation for general load, Standing wave ratio,<br>Special transformation conditions. Admittance Transformations: Parametric<br>admittance equation, Additional graphical displays. |
|                      | UNIT III: 05<br>Parallel and series Connections: Parallel connections of R and L connections,<br>Parallel connections of R and C connections, Series connections of R and L<br>connections, Series connections of R and C connections, Example of a T Network.<br>RF Filter Design: Filter types and parameters, Low pass filter, High pass filter,<br>Bandpass and Bandstop filter, Insertion Loss.  |
|                      | UNIT IV: 10<br>Filter Implementation: Unit Elements, Kuroda's Identities and Examples of Micros<br>trip Filter Design. Coupled Filters: Odd and Even Mode Excitation, Bandpass Filter<br>Design, Cascading bandpass filter elements, Design examples. Active RF<br>Components: Semiconductor Basics: Physical properties of semiconductors, PN-<br>Junction, Schottky contact. Bipolar-Junction Transistors: Construction,<br>Functionality, Temperature behaviour, Limiting values.  |

| Course                              | UNIT I:  |   |  |  |  |  |
|-------------------------------------|--|---|--|--|--|--|
| Contents                            | Introduction: Basic principle of MOS transistor, Introduction to large signal MOS models (long channel) for digital design.  |   |  |  |  |  |
|                                     | MOS Circuit Layout & Simulation and manufacturing: scaling, MOS<br>SPICE model and simulation, CMOS layout: design rules, Transistor<br>layout, Inverter layout, NMOS and CMOS basic manufacturing steps.<br>CMOS latch-up and its prevention.   |   |  |  |  |  |
|                                     | UNIT II:   |   |  |  |  |  |
|                                     | The MOS Inverter: Inverter principle, the basic CMOS inverter, transfer<br>characteristics, logic threshold, Noise margins, switching characteristics,<br>Propagation Delay, Power Consumption.  | 9 |  |  |  |  |
|                                     | Combinational MOS Logic Design: Static MOS design, Ratioed logic,<br>Pass Transistor logic, complex logic circuits. CMOS Transmission Gates,<br>Complementary Pass Transistor Logic, Transistor sizing in static CMOS,<br>logical effort, Pass-transistor logic, sizing issues.              |   |  |  |  |  |
|                                     | UNIT III:  |   |  |  |  |  |
|                                     | Sequential Logic Circuits: Introduction, Static Latches and Registers,<br>Dynamic Latches and registers, Pipelining. Timing issues in Digital<br>Circuits: Timing classification of digital systems, Synchronous Design<br>Timing basics, clock skew, clock jitter and their combine impact. | 9 |  |  |  |  |
|                                     | Dynamic Logic Circuits: Voltage Bootstrapping, Synchronous Dynamic<br>Logic, Dynamic CMOS Logic, High Performance Dynamic CMOS<br>Circuits, Domino CMOS logic, NP-Domino Logic, Zipper CMOS Circuits,<br>TSPC Dynamic CMOS.  |   |  |  |  |  |
|                                     | UNIT IV:   |   |  |  |  |  |
|                                     | <ul><li>VLSI Design Methodologies, VLSI Design Flow, Design Hierarchy,<br/>Concepts of Regularity, Modularity and Locality, VLSI Design Styles.</li><li>CMOS Sub system design: Adders, Multipliers, MOS memories:</li></ul>   | 9 |  |  |  |  |
|                                     | Introduction, DRAM and SRAM.   |   |  |  |  |  |
| Course<br>Assessment                | Continuous Evaluation 25%<br>Mid Semester 25%<br>End Semester 50%  |   |  |  |  |  |
| Tentative list<br>of<br>Experiments | <ul> <li>Adder circuit</li> <li>SRAM Cell design</li> <li>CMOS Circuit design</li> </ul>   |   |  |  |  |  |
|                                     | <ul><li>CMOS Circuit design</li><li>SPICE simulation</li></ul>   |   |  |  |  |  |

| Content              | UNIT I:9  |
|----------------------|---|
|                      | Introduction to Analog IC Design, The Design Flow of Analog ICs, MOSFET Parameters, MOSFET models, MOS Diode, MOS Capacitors, MOS Switch, Noise in MOSFETs, MOS Current sources and current sink circuits, Voltage and Current reference circuits, MOS Gain stages, Source Followers, Amplifiers. |
|                      | <b>UNIT II:</b> 9<br>Differential Amplifiers, Operation Amplifiers, Stability Theory and Compensation in<br>CMOS Operational Amplifiers, Op-amp Design Techniques and practical consideration<br>in design of op-amp, High Performance.   |
|                      | <b>UNIT III:</b> 9<br>CMOS Op-amp Design, Design of MOS Comparators, Data Converter Fundamentals,<br>Digital-to-analog Converters, Analog-to-Digital Converters, Switch Capacitor Filters,<br>Mismatch Issues in Analog Layouts, Phase locked loops, Introduction to RF IC Design.                |
|                      | <b>UNIT-IV:</b> 9<br>General Considerations- Sampling switches- Switched Capacitor Amplifiers- Switched Capacitor Integrator- Switched Capacitor Common mode feedback. Phase Locked Loops Simple PLL- Charge pump PLLs - Non ideal Effects in PLLs- Delay locked loops- its applications.         |

|                   | <b>UNIT I:</b> 9  |
|-------------------|---|
|                   | Introduction: Moore's law, Technological trends, Interconnect scaling, 3D interconnect view; Interconnect Parameters: Resistance, Inductance, and Capacitance, skin effect and its influence on resistance and inductance Interconnect RC Delays: Elmore Delay Calculation. Interconnect Models: The lumped RC Model, the distributed RC Model, the transmission line model. SPICE Wire Models: Distributed RC lines in SPICE, Transmission line models in SPICE. |
| Content           | <b>UNIT II:</b> 9<br>Scaling issues in interconnects: Gate and Interconnect Delay; CMOS Repeater: The<br>Static Behavior- Switching Threshold, Noise Margins, The Dynamic Behavior-<br>Computing the capacitances, Propagation Delay: First order Analysis, Propagation<br>Delay from a Design perspective, Power, energy and Energy-Delay- Dynamic<br>Power Consumption, Static Consumption, Analyzing Power Consumption using<br>SPICE.                         |
|                   | <b>UNIT III:</b> 9<br>Repeater Design: Driving Interconnects for Optimum speed and power; Short channel model of CMOS Repeater - Transient Analysis of an RC loaded CMOS repeater, Delay Analysis, Analytical power expressions: Dynamic power, Short circuit Power, Resistive Power Dissipation, CMOS Repeater insertion: Analytical expressions for delay and power of a repeater chain driving an RC load.   |
|                   | UNIT IV: 9<br>Advanced Interconnect Techniques: Reduced-swing Circuits, Current-mode<br>Transmission Techniques<br>Crosstalk: Theoretical basis and circuit level modeling of crosstalk, Energy<br>dissipation due to crosstalk: Model for energy calculation of two coupled lines.   |
|                   | Contribution of driver and interconnect to dissipated energy, Crosstalk effects in logic VLSI circuits: Static circuits, Dynamic circuits and various remedies.   |

| Content           | UNIT I: 05   |
|-------------------|--|
|                   | Basic Switching System, Simple Tele-Phone Communication, Telephone   |
|                   | Transmitter, Telephone receiver, Telephone's bell &dialer pulsing mechanism,   |
|                   | subscribers telephone sets, dialing types, signaling tones.  |
|                   |  |
|                   | UNIT II: 07  |
|                   | Introduction to Electromagnetic Exchanges, Basic line circuits in telephony and telegraphy; long-haul communication circuits; statistical bandwidth sharing, |
|                   | principles of traffic switching.   |
|                   | principles of traine switching.  |
|                   | UNIT III: 08   |
|                   | crossbar switches; switching system hierarchy, SPC switching, basic call   |
|                   | processing, Level 1, 2 & 3 controls, interface controller, network control processor,  |
|                   | central processor, single stage and multi-stage switching network, principles of   |
|                   | large-scale, switch design. Space Division Switching Stored Programme Control –  |
|                   | Centralized SPC, Distributed SPC, Software Architecture, Application Software –<br>Enhanced Services, Multi Stage Switching Networks.                        |
|                   | Eminanced Services, Wulti Stage Switching Retworks.  |
|                   | UNIT IV: 08  |
|                   | Basic terminologies: BHCA, BHCR, CCR, CCS, CM, Erlang, Grade of Service and  |
|                   | Blocking Probability - Telephone Networks, Subscriber Loops, Switching   |
|                   | Hierarchy and Routing, Signaling Techniques: In Channel, Common Channel.   |
|                   | Transmission media, Markov process, birth death process, Erlang formulas,  |
|                   | Queuing theory.  |
|                   | UNIT V: 08   |
|                   | Time Division space switching, Time Division Time Switching, Time multiplexed  |
|                   | space switching, Time multiplexed Time Switching, Combination Switching  |
| Course Assessment | Continuous Evaluation 25%  |
|                   | Mid Semester 25%   |
|                   | End Semester 50%   |

| Content         | UNIT I: 05  |
|-----------------|---|
|                 | Analysis and design of systems employing radio waves, covering both the underlying        |
|                 | electromagnetic and the overall system performance aspects such as signal-to-noise        |
|                 | ratios. Antennas  |
|                 | UNIT II: 07   |
|                 | Transmission/reception phenomena include: electromagnetic wave radiation and              |
|                 | polarization; elementary and linear dipoles; directivity, gain, efficiency; integrated,   |
|                 | phased-array and aperture antennas; beam-steering; Friis transmission formulas.           |
|                 | UNIT III: 08  |
|                 | Propagation phenomena include: diffraction and wave propagation over obstacles;           |
|                 | multipath propagation; atmospheric and ionospheric effects.                               |
|                 | UNIT IV: 08   |
|                 | Receiver design aspects include: radio receiver architectures, receiver figures of merit, |
|                 | noise in cascaded systems, noise figure, and noise temperature.                           |
|                 | UNIT V: 08  |
|                 | System examples are: terrestrial communication systems; satellite communications;         |
|                 | radar; radiometric receivers; software-defined systems.                                   |

| Content           | UNIT I: 06   |
|-------------------|--|
|                   | Introduction to adhoc networks – definition, characteristics features, applications.<br>Characteristics of Wireless channel, Adhoc Mobility Models: - Indoor and outdoor models.   |
|                   | <b>UNIT II:</b> 09<br>MAC Protocols: design issues, goals and classification. Contention based protocols-<br>with reservation, scheduling algorithms, protocols using directional antennas. IEEE<br>standards: 802.11a, 802.11b, 802.11g, 802.15. HIPERLAN.                          |
|                   | <b>UNIT III:</b> 09<br>Routing Protocols: Design issues, goals and classification. Proactive Vs reactive<br>routing, Unicast routing algorithms, Multicast routing algorithms, hybrid routing<br>algorithm, Energy aware routing algorithm, Hierarchical Routing, QoS aware routing. |
|                   | <b>UNIT IV:</b> 09<br>Transport layer: Issues in designing- Transport layer classification, adhoc transport protocols. Security issues in adhoc networks: issues and challenges, network security attacks, secure routing protocols.   |
|                   | <b>UNIT V:</b> 09<br>Cross layer Design: Need for cross layer design, cross layer optimization, parameter optimization techniques, Cross layer cautionary prespective. Integration of adhoc with Mobile IP networks.   |

| Contont    | UNIT I: 05  |
|------------|---|
| Content    |   |
|            | Characteristics of passive IC components at RF frequencies: Interconnects,  |
|            | resistors, capacitors, inductors and transformers - Transmission lines. Noise -   |
|            | classical two-port noise theory, noise models for active and passive components.  |
|            | UNIT II: 10   |
|            | High frequency amplifier design: Zeros as bandwidth enhancers, shunt-series amplifier, fT doublers, neutralization and unilateralization <b>Low</b> noise <b>amplifier design</b> : LNA topologies, power constrained noise optimization, linearity and large signal performance. |
|            | UNIT III: 05<br>Mixers: Nonlinear systems as linear mixers, multiplier-based mixers, subsampling<br>mixers, diode-ring mixers.  |
|            | <b>UNIT VI: 08</b><br>RF power amplifiers: Class A, AB, B, C, D, E and F amplifiers, modulation of power amplifiers, design and linearity considerations.   |
|            | UNIT IV: 08   |
|            | Oscillators & synthesizers: Basic topologies, VCO, describing functions, resonators, negative resistance oscillators, synthesis with static moduli, synthesis with dithering moduli, combination synthesizers – phase noise considerations.                                       |

| Content              | UNIT I: 06   |
|----------------------|--|
|                      | Analysis of rectangular and circular waveguides and resonators, TE and TM modes, Q of the cavity, loss mechanisms, scattering matrix, directional coupler, waveguide tees, hybrid couplers, Faraday rotation in ferrites, isolator, circulator. Passive microwave circuits: Microstrip and stripline, filter implementation with transmission lines and strip lines. |
|                      | <b>UNIT II:</b> 06<br>Klystron – velocity modulation and bunching, Travelling wave tube – slow wave structure and Brillouin diagram. Maser – population inversion, pumping and stimulated emission.  |
|                      | <b>UNIT III:</b> 06<br>BJTs, MESFETs, tunnel diode, parametric amplifiers – Principle and analysis of<br>amplifier configurations and parameters like gain, bandwidth, noise figure,<br>dynamic range - Single stage and broad band transistor amplifier designs – stability.  |
|                      | <b>UNIT IV:</b> 06<br>Reflex klystron, magnetron, Gunn diode, IMPATT and TRAPPAT diodes, parametric oscillators – Principle and analysis of oscillator configurations, efficiency, tunability.   |

|                    | UNIT I: 08  |  |  |  |  |  |
|--------------------|---|--|--|--|--|--|
| Content            | Introduction to data communication and networking: Why study data communication? Data Communication, Networks, Protocols and Standards, Standards Organizations. Line Configuration, Topology, and Transmission Modes, Categories of Networks Internet works, history and development of computer networks.<br>Basic Network Architectures: OSI reference model, TCP/IP reference model, and Networks topologies, types of networks (LAN, MAN, WAN, circuit-switched, packet-switched, message switched, extranet, intranet, Internet, wired, wireless)   |  |  |  |  |  |
|                    | <b>UNIT II:</b> 08<br>Study of Signals: Analog and Digital, Periodic and Aperiodic Signals, Analog Signals, Time and Frequency Domains, Composite Signals, Digital Signals,   |  |  |  |  |  |
|                    | <ul> <li>Physical layer: line encoding, block encoding, scrambling, and Different types of transmission media.</li> <li>Data Link Layer services: framing, error control, flow control, medium access control. Error &amp; Flow control mechanisms: stop and wait, Go back N and selective repeat. MAC protocols: Aloha, slotted aloha, CSMA, CSMA/CD, CSMA/CA, polling, token passing, scheduling.</li> </ul>  |  |  |  |  |  |
|                    | UNIT III: 08<br>Guided Media, Unguided Media, Transmission Impairments, Performance Wavelength,<br>Shannon Capacity, Media Comparison, PSTN, Switching, Local Area Network Technology:<br>Token Ring. Error detection (Parity, CRC), Ethernet, Fast Ethernet, Gigabit Ethernet, Personal<br>Area Network: Bluetooth and Wireless Communications Standard: Wi-Fi (802.11) and WiMAX.   |  |  |  |  |  |
|                    | UNIT IV: 12<br>Network layer: Internet Protocol, IPv6, ARP, DHCP, ICMP, Routing algorithms: Distance vector, Link state, Metrics, Inter-domain routing. Subnetting, Supernetting, Classless addressing, Network Address Translation. Introduction to networks and devices: Network classes, Repeaters, Hub, Bridges, Switches, Routers, Gateways Brouters Routing Algorithms, Distance Vector Routing, Link State Routing, Transport layer: UDP, TCP. Connection establishment and termination, sliding window, flow and congestion control, timers, retransmission, TCP extensions, Queuing theory, Single and multiple server queuing models, Little's formula. Application Layer. Network Application services and protocols including e-mail, www, DNS, SMTP. |  |  |  |  |  |
