

Proposed Scheme & Syllabus
For
Bachelor of Technology
Computer Science & Engineering Department

National Institute of Technology
Delhi

A Choice Based Flexible Credit Requirement

| Sl. No. | Category of Courses | Credits Offered | Minimum Credits to be Earned |
|----------------|---------------------------------------|------------------------|-------------------------------------|
| 1. | Basic Science Courses | 26 | 26 |
| 2. | Other Engineering Courses | 33 | 33 |
| 3. | Humanities and Social Science Courses | 12 | 12 |
| 4. | Departmental Core Courses | 68 | 68 |
| 5. | Elective Courses | 21 | 15 |
| 6. | Open Elective Courses | 06 | 03 |
| 7. | Other Mandatory Courses | 09 | 09 |
| 8. | Departmental Major Projects | 14 | 14 |

Minimum Credits Required for Award of B.Tech. (CSE) Degree = 180

COURSES OFFERED BY DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING**SEMESTER - I**

| Sl. No. | Course Code | Course Title | L | T | P | Credits |
|----------------------|-------------|---|-----------|----------|-----------|-----------|
| 1. | CYL 100 | Chemical Structures & Reactivity | 3 | 1 | 0 | 4 |
| 2. | CSB 101 | Problem Solving and Computer Programming | 3 | 0 | 2 | 4 |
| 3. | MAL 101 | Advanced Calculus | 3 | 1 | 0 | 4 |
| 4. | MEB 100 | Engineering Visualization | 3 | 0 | 2 | 4 |
| 5. | HMB 101 | Human Values and Ethics | 3 | 0 | 2 | 4 |
| 6. | MEL 102 | Engineering Mechanics | 3 | 0 | 0 | 3 |
| 7. | CYP 100 | Chemistry Laboratory | 0 | 0 | 3 | 2 |
| 8. | MEP 103 | Product Design and Realization Laboratory I | 0 | 0 | 2 | 1 |
| 9. | EAP 101 | Extra-Academic Activity | 0 | 0 | 2 | 1 |
| Total Credits | | | 18 | 2 | 13 | 27 |

SEMESTER-II

| Sl. No. | Course Code | Course Title | L | T | P | Credits |
|----------------------|-------------|--|-----------|----------|-----------|-----------|
| 1. | PHL 100 | Electromagnetic and Quantum Physics | 3 | 1 | 0 | 4 |
| 2. | CSB 102 | Data Structures | 3 | 0 | 2 | 4 |
| 3. | MAL 151 | Linear Algebra and Complex Analysis | 3 | 1 | 0 | 4 |
| 4. | EEB 100 | Introduction to Electrical and Electronics Engineering | 3 | 0 | 2 | 4 |
| 5. | HMB 100 | Professional Communication | 3 | 0 | 2 | 4 |
| 6. | MEL 101 | Environmental Studies | 3 | 0 | 0 | 3 |
| 7. | PHP 100 | Physics Laboratory | 0 | 0 | 3 | 2 |
| 8. | MEP 104 | Product Design and Realization Laboratory II | 0 | 0 | 2 | 1 |
| 9. | EAP 102 | Extra-Academic Activity | 0 | 0 | 2 | 1 |
| Total Credits | | | 18 | 2 | 13 | 27 |

SEMESTER - III

| Sl.No. | Course No. | Course Title | L | T | P | Credits |
|----------------------|------------|---|-----------|----------|----------|-----------|
| 1. | MAL 241 | Probability and Statistics | 3 | 1 | 0 | 4 |
| 2. | ECB 206 | Analog Electronics | 3 | 0 | 2 | 4 |
| 3. | CSL 201 | Discrete structures | 3 | 1 | 0 | 4 |
| 4. | CSB 202 | Database Management System | 3 | 0 | 2 | 4 |
| 5. | ECB 204 | Signals and Systems | 3 | 0 | 2 | 4 |
| 6. | CSL 203 | System Programming | 3 | 1 | 0 | 4 |
| 7. | CSP 211 | Colloquium/ Industrial Lecture/ Seminar | 0 | 0 | 2 | 1 |
| Total Credits | | | 18 | 3 | 8 | 25 |

SEMESTER- IV

| Sl.No. | Course No. | Course Title | L | T | P | Credits |
|----------------------|------------|---|-----------|----------|-----------|-----------|
| 1. | ECB 256 | Communication Systems | 3 | 0 | 2 | 4 |
| 2. | CSL 251 | Theory of Computation | 3 | 1 | 0 | 4 |
| 3. | CSB 252 | Design and Analysis of Algorithms | 3 | 0 | 2 | 4 |
| 4. | CSB 253 | Software Engineering | 3 | 0 | 2 | 4 |
| 5. | ECB 257 | Digital Electronics and Logic Design | 3 | 0 | 2 | 4 |
| 6. | CSB 27X | Elective I (From Bouquet I) | 2 | 0 | 2 | 3 |
| 7. | MAP 281 | Numerical Methods Lab | 0 | 0 | 3 | 2 |
| 8. | CSP 312 | Summer Internship-I (Credit will be added in next semester) | - | - | - | - |
| Total Credits | | | 17 | 1 | 13 | 25 |

SEMESTER- V

| Sl.No. | Course No. | Course Title | L | T | P | Credits |
|----------------------|------------|---|-----------|----------|----------|-----------|
| 1. | CSB 301 | Computer Organization | 3 | 0 | 2 | 4 |
| 2. | CSL 36X | Elective-II (From Bouquet II) | 3 | 0 | 0 | 3 |
| 3. | CSB 302 | Operating System | 3 | 0 | 2 | 4 |
| 4. | CSL 303 | Artificial Intelligence | 3 | 1 | 0 | 4 |
| 5. | CSB 304 | Computer Networks | 3 | 0 | 2 | 4 |
| 6. | HML 351 | Engineering Economics & Accountancy | 3 | 0 | 0 | 3 |
| 7. | CSP 311 | Colloquium/ Industrial Lecture/ Seminar | 0 | 0 | 2 | 1 |
| 8. | CSP 312 | Summer Internship-I | - | - | - | 1 |
| Total Credits | | | 18 | 1 | 8 | 24 |

SEMESTER- VI

| Sl. No. | Course No. | Course Title | L | T | P | Credits |
|----------------------|------------|--|-----------|----------|-----------|-----------|
| 1. | CSB 351 | Network Programming | 3 | 0 | 2 | 4 |
| 2. | CSB 352 | Data Mining | 3 | 0 | 2 | 4 |
| 3 | CSB 353 | Compiler Design | 3 | 0 | 2 | 4 |
| 4. | CSL 37X | Elective-III (From Bouquet III) | 3 | 0 | 0 | 3 |
| 5. | ECB 355 | Microprocessors and Interfacing | 3 | 0 | 2 | 4 |
| 6. | | Open Elective I | 3 | 0 | 0 | 3 |
| 7. | HMP 352 | Technical Communication | 0 | 0 | 2 | 1 |
| 8. | CSP 411 | Summer Internship/ Summer Project-II (Credit will be added in next semester) | - | - | - | - |
| Total Credits | | | 18 | 0 | 10 | 23 |

SEMESTER- VII

| Sl. No | Course No. | Course Title | L | T | P | Credits |
|----------------------|------------|-------------------------------|-----------|----------|----------|-----------|
| 1. | CSB 401 | Theory of App Development | 2 | 0 | 3 | 4 |
| 2. | CSL 4XX | Elective-IV (From Bouquet IV) | 3 | 0 | 0 | 3 |
| 3. | CSL 4XX | Elective -V (From Bouquet IV) | 3 | 0 | 0 | 3 |
| 4. | | Open Elective - II | 3 | 0 | 0 | 3 |
| 5. | CSP 400 | Project Work | 0 | 0 | 6 | 4 |
| 7. | CSP 411 | Summer Internship-II | - | - | - | 1 |
| Total Credits | | | 11 | 0 | 9 | 18 |

SEMESTER- VIII

| Sl.No. | Course No. | Course Title | L | T | P | Credits |
|----------------------|------------|-----------------------------------|----------|----------|-----------|-----------|
| 1. | CSB 451 | Network Security and Cryptography | 3 | 0 | 2 | 4 |
| 2. | CSL 4XX | Elective -VI (From Bouquet IV) | 3 | 0 | 0 | 3 |
| 3. | CSL 4XX | Elective-VII (From Bouquet IV) | 3 | 0 | 0 | 3 |
| 4. | CSP 450 | Project Work | 0 | 0 | 15 | 10 |
| Total Credits | | | 9 | 0 | 17 | 20 |

ELECTIVE COURSES**BOUQUET I**

| Sl. No. | Course No. | Course Title | L | T | P | Credits |
|---------|------------|-----------------------------|---|---|---|---------|
| 1. | CSB 271 | Java Technologies | 2 | 0 | 2 | 3 |
| 2. | CSB 272 | Foundation of Programming | 2 | 0 | 2 | 3 |
| 3. | CSB 273 | Object Oriented Programming | 2 | 0 | 2 | 3 |
| 4. | CSB 274 | Web Programming | 2 | 0 | 2 | 3 |

BOUQUET II

| Sl. No. | Course No. | Course Title | L | T | P | Credits |
|---------|------------|--|---|---|---|---------|
| 1. | CSL 371 | Advances in Algorithms | 3 | 0 | 0 | 3 |
| 2. | CSL 362 | Middleware Technologies | 3 | 0 | 0 | 3 |
| 3. | CSL 363 | Graph Theory and Combinatorics | 3 | 0 | 0 | 3 |
| 4. | CSL 364 | Software Quality and Testing | 3 | 0 | 0 | 3 |
| 5. | CSL 365 | Software Metrics and Software Project Management | 3 | 0 | 0 | 3 |

| | | | | | | |
|----|---------|-----------------------------------|---|---|---|---|
| 6. | CSL 366 | Architectural and Design Patterns | 3 | 0 | 0 | 3 |
|----|---------|-----------------------------------|---|---|---|---|

BOUQUET III

| Sl.No. | Course No. | Course Title | L | T | P | Credits |
|--------|------------|--------------------------------------|---|---|---|---------|
| 1 | CSL 361 | Advance Data Base Management Systems | 3 | 0 | 0 | 3 |
| 2 | CSL 372 | Concurrent and Parallel Programming | 3 | 0 | 0 | 3 |
| 3 | CSL 373 | Computer Graphics | 3 | 0 | 0 | 3 |
| 4 | CSL 374 | Advanced Computer Networks | 3 | 0 | 0 | 3 |
| 5 | CSL 375 | Soft Computing | 3 | 0 | 0 | 3 |
| 6 | CSL 376 | Cloud Computing | 3 | 0 | 0 | 3 |
| 7 | CSL 377 | Natural Language Processing | 3 | 0 | 0 | 3 |
| 8 | CSL 378 | Distributed Computing | 3 | 0 | 0 | 3 |

BOUQUET IV

| Sl.No. | Course No. | Course Title | L | T | P | Credits |
|--------|------------|---------------------------------|---|---|---|---------|
| 1 | CSL 461 | Computational Complexity | 3 | 0 | 0 | 3 |
| 2 | CSL 462 | Digital Image Processing | 3 | 0 | 0 | 3 |
| 3 | CSL 463 | Computer Vision | 3 | 0 | 0 | 3 |
| 4 | CSL 464 | Simulation and Modeling | 3 | 0 | 0 | 3 |
| 5 | CSL 465 | Neural Networks | 3 | 0 | 0 | 3 |

| 17 | CSL 477 | Game Theory | 3 | 0 | 0 | 3 |
| 18 | CSL 478 | Multi Agent Systems | 3 | 0 | 0 | 3 |
| 19 | CSL 479 | Reconfigurable Computing | 3 | 0 | 0 | 3 |
| 20 | CSL 480 | Bio-informatics | 3 | 0 | 0 | 3 |

| | | | | | | |
|----|---------|-----------------------------|---|---|---|---|
| 21 | CSL 481 | Biomedical Image Processing | 3 | 0 | 0 | 3 |
| 22 | CSL 482 | Fault Tolerant Computing | 3 | 0 | 0 | 3 |
| 23 | CSL 483 | Wireless Sensor Networks | 3 | 0 | 0 | 3 |

Basic Science Courses:

| Sl.No. | Course No. | Course Title | L | T | P | Credits |
|----------------------|------------|-------------------------------------|-----------|----------|----------|-----------|
| 1. | PHL 100 | Electromagnetic and Quantum Physics | 3 | 1 | 0 | 4 |
| 2. | MAL 101 | Advanced Calculus | 3 | 1 | 0 | 4 |
| 3. | CYL 100 | Chemical Structures and Reactivity | 3 | 1 | 0 | 4 |
| 4. | MAL 151 | Linear Algebra and Complex Analysis | 3 | 1 | 0 | 4 |
| 5. | PHP 100 | Physics Laboratory | 0 | 0 | 3 | 2 |
| 6. | CYP 100 | Chemistry Laboratory | 0 | 0 | 3 | 2 |
| 7. | MEL 103 | Probability and Statistics | 3 | 1 | 0 | 4 |
| 8. | MAP 281 | Numerical Methods Lab | 0 | 0 | 3 | 2 |
| Total Credits | | | 15 | 5 | 9 | 26 |

Other Engineering Courses:

| Sl. No. | Course No. | Course Title | L | T | P | Credits |
|----------------------|------------|--|-----------|----------|-----------|-----------|
| 1. | EEB 100 | Introduction to Electrical and Electronics Engineering | 3 | 0 | 2 | 4 |
| 2. | MEP 103 | Product Design and Realization Laboratory-I | 0 | 0 | 2 | 1 |
| 3. | MEP 104 | Product Design and Realization Laboratory-II | 0 | 0 | 2 | 1 |
| 4. | MEB 100 | Engineering Visualization | 3 | 0 | 2 | 4 |
| 5. | MEL 102 | Engineering Mechanics | 3 | 0 | 0 | 3 |
| 6. | ECB 257 | Digital Electronics & Logic Design | 3 | 0 | 2 | 4 |
| 7. | ECB 256 | Communication Systems | 3 | 0 | 2 | 4 |
| 8. | ECB 204 | Signals & Systems | 3 | 0 | 2 | 4 |
| 9. | ECB 206 | Analog Electronics | 3 | 0 | 2 | 4 |
| 10. | ECB 355 | Microprocessors and Interfacing | 3 | 0 | 2 | 4 |
| Total Credits | | | 24 | 0 | 18 | 33 |

Humanities Courses:

| Sl. No. | Course No. | Course Title | L | T | P | Credits |
|----------------------|------------|---------------------------------------|----------|----------|----------|-----------|
| 1. | HMB 100 | Professional Communication | 3 | 0 | 2 | 4 |
| 2. | HMB 101 | Human Values and Ethics | 3 | 0 | 2 | 4 |
| 3. | HML 351 | Engineering Economics and Accountancy | 3 | 0 | 0 | 3 |
| 4. | HMP 352 | Technical Communication | 0 | 0 | 2 | 1 |
| Total Credits | | | 9 | 0 | 6 | 12 |

Departmental Elective Courses:

| Sl. No. | Course No. | Course Title | L | T | P | Credits |
|----------------------|------------|-----------------------------|-----------|----------|----------|-----------|
| 1. | CSL 24X | Departmental Elective – I | 3 | 0 | 0 | 3 |
| 2. | CSL 36X | Departmental Elective – II | 3 | 0 | 0 | 3 |
| 3. | CSL 37X | Departmental Elective – III | 3 | 0 | 0 | 3 |
| 4. | CSL 46X | Departmental Elective – IV | 3 | 0 | 0 | 3 |
| 5. | CSL 46X | Departmental Elective – V | 3 | 0 | 0 | 3 |
| 6. | CSL 44X | Departmental Elective – VI | 3 | 0 | 0 | 3 |
| 7. | CSL 46X | Departmental Elective – VII | 3 | 0 | 0 | 3 |
| Total Credits | | | 21 | 0 | 0 | 21 |

Open Elective Courses:

| Sl. No. | Course No. | Course Title | L | T | P | Credits |
|----------------------|------------|--------------------|----------|----------|----------|----------|
| 1. | | Open Elective – I | 3 | 0 | 0 | 3 |
| 2. | | Open Elective – II | 3 | 0 | 0 | 3 |
| Total Credits | | | 6 | 0 | 0 | 6 |

Major Project Courses:

| Sl. No. | Course No. | Course Title | L | T | P | Credits |
|----------------------|------------|--------------|----------|----------|-----------|-----------|
| 1. | CSP 400 | Project – I | 0 | 0 | 6 | 4 |
| 2. | CSP 450 | Project – II | 0 | 0 | 15 | 10 |
| Total Credits | | | 0 | 0 | 21 | 14 |

Other Mandatory Courses:

| Sl. No. | Course No. | Course Title | L | T | P | Credits |
|---------|------------|---|---|---|---|---------|
| 1. | MEL 101 | Environmental Studies | 3 | 0 | 0 | 3 |
| 2. | CSP 312 | Summer Internship/ Summer Project – I | 0 | 0 | 2 | 1 |
| 3. | CSP 411 | Summer Internship/ Summer Project – II | 0 | 0 | 2 | 1 |
| 4. | CSP 211 | Colloquium/ Industrial Lecture/ Seminar | 0 | 0 | 2 | 1 |
| 5. | CSP 312 | Colloquium/ Industrial Lecture/ Seminar | 0 | 0 | 2 | 1 |

| | | | | | | |
|----------------------|---------|------------------------------|----------|----------|-----------|----------|
| 6. | EAP 101 | Extra-Academic Activity - I | 0 | 0 | 2 | 1 |
| 7. | EAP 102 | Extra-Academic Activity - II | 0 | 0 | 2 | 1 |
| Total Credits | | | 3 | 0 | 12 | 9 |

Core Engineering Courses:

| Sl. No. | Course No. | Course Title | L | T | P | Credits |
|----------------------|------------|--|-----------|----------|-----------|-----------|
| 1. | CSB 101 | Problem Solving and Computer Programming | 3 | 0 | 2 | 4 |
| 2. | CSB 102 | Data Structures | 3 | 0 | 2 | 4 |
| 3. | CSL 201 | Discrete structures | 3 | 1 | 0 | 4 |
| 4. | CSB 253 | Software Engineering | 3 | 0 | 2 | 4 |
| 5. | CSB 252 | Design and Analysis of Algorithm | 3 | 0 | 2 | 4 |
| 6. | CSL 251 | Theory of Computation | 3 | 1 | 0 | 4 |
| 7. | CSB 301 | Computer Organization | 3 | 0 | 2 | 4 |
| 8. | CSB 202 | Database Management System | 3 | 0 | 2 | 4 |
| 9. | CSL 203 | System Programming | 3 | 1 | 0 | 4 |
| 10. | CSB 353 | Compiler Design | 3 | 0 | 2 | 4 |
| 11. | CSB 302 | Operating System | 3 | 0 | 2 | 4 |
| 12. | CSL 303 | Artificial Intelligence | 3 | 1 | 0 | 4 |
| 13. | CSB 351 | Network Programming | 3 | 0 | 2 | 4 |
| 14. | CSB 304 | Computer Networks | 3 | 0 | 2 | 4 |
| 15. | CSB 352 | Data Mining | 3 | 0 | 2 | 4 |
| 16. | CSB 451 | Network Security and Cryptography | 3 | 0 | 2 | 4 |
| 17. | CSB 401 | Theory of App Development | 2 | 0 | 3 | 4 |
| Total Credits | | | 50 | 4 | 27 | 68 |

| 1 | Title | Programming in ANSI C | | | |
| | Author | E. Balagurusamy | | | |
| | Publisher | TATA McGraw Hill | | | |
| | Edition | 6 th edition, 2012 | | | |
| Reference Book: | | | | | |
| 1 | Title | Let Us C | | | |
| | Author | Yashavant Kanetkar | | | |
| | Publisher | Infinity Science Press | | | |
| | Edition | 13 th edition, 2012 | | | |
| 2 | Title | The C Programming Language | | | |
| | Author | Brian Kernighan & Dennis Ritchie | | | |

| | | |
|-------------------|---|--|
| | Publisher | Prentice Hall |
| | Edition | 2nd Edition, 1988 |
| 3 | Title | Schaum's Outline of Programming with C |
| | Author | Byron S Gottfried |
| | Publisher | TATA Mc Graw Hill |
| | Edition | 2 nd edition, 1996 |
| Content | <p>Unit - 1 (5 Hours) Introduction to Computers: Hardware and Software. Basic Model of Computation, Notion of Algorithms, Flowcharts, Top down design, Bottom up approaches of problem solving, Number system.</p> <p>Unit - 2 (9 Hours) Introduction to programming language, Basics of C, Basic Data types – int, float, double, char, Bool, Void. Arithmetic and logical operators: precedence and associativity. Flow of Control- Conditional statements- If-else, Switch-case constructs, Loops- While, do-while, for.</p> <p>Unit - 3 (7 Hours) Function – User defined functions, library functions, Parameter passing – call by value, call by reference, recursion.</p> <p>Unit - 4 (7 Hours) Arrays- Advantages and drawbacks, One dimensional, Multi-Dimensional Arrays and strings: Declaration, Initialization, Accessing, Passing arrays and strings as parameters to functions. Pointers, Dynamic memory allocation, Dynamic arrays – One dimensional, Multidimensional dynamic arrays.</p> <p>Unit - 5 (8 Hours) Structure: Declaration, Initialisation, passing structure to function, Use of pointers in structure. Preprocessors, Macros, File management in C I/O – Opening, closing and editing files. Correctness & Efficiency Issues in Programming, Time & Space measures.</p> | |

| | Author | M. Morris Mano |
| | Publisher | Pearson |
| | Edition | |
| Content | <p>Unit I: 08 Electrical Circuit Analysis: Voltage & Current sources: dependent & independent source, source conversion. Analysis of D.C. circuits: Mesh & Loop analysis, Nodal analysis. Network Theorems: Thevenin's, Norton's, superposition theorem etc. Star- Delta circuits. 1-Φ ac Circuits: Review of 1-Φ phase ac circuits under sinusoidal steady state conditions, Resonance, Active, Reactive and Apparent power, Power factor. 3-Φ ac circuits: Balanced and Unbalanced supply, Star and Delta connections, power measurement.</p> <p>Unit II: 06 Transformers: Magnetic Circuits: Review of laws of electromagnetism, Flux, MMF and their relation, analysis of magnetic and electric circuit. Single phase transformer: Basic concepts, constructional features, EMF equation, voltage, current and impedance transformation, Equivalent circuits.</p> <p>Unit III: 08 Electrical Machines: DC Machines: Constructional features, working principle, emf equation, types of dc machines and their characteristics. Induction Machines: Constructional features, working principle, emf equation, concept of slip and torque-slip characteristics. Synchronous Machines: Constructional features, working principle and emf equation.</p> <p>Unit IV: 08 Digital electronics: Number systems: decimal, binary, octal, hexadecimal, their complements, operation and conversion, floating point and signed numbers. Demorgan's theorem, Logic Gates: Basic and Universal Gates, their representation, truth table and realization, Half and Full adder circuits, Flip-Flops etc.</p> <p>Unit V: 06 Electronic Devices and Circuits: Introduction to semiconductors, Diodes: types of diodes and their characteristic. Bipolar Junction Transistors: working, configurations (CC, CB & CE) and mode of operation.</p> | |

| | |
|--------------------------|---|
| | <p>Unit II: 06 Ecosystems - Structure and function of an ecosystem. Producers, consumers and decomposers. Energy flow in the ecosystem. Ecological succession. Food chains, food webs and ecological pyramids. Introduction, types, characteristic features, structure and function of the following ecosystems: - a. Forest ecosystem b. Grassland ecosystem c. Desert ecosystem d. Aquatic ecosystems, Biogeochemical cycles</p> <p>Unit III: 06 Natural Resources: Concept of Renewable and non-renewable resources, Natural resources and associated problems. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles. Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forest and tribal people. Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems. Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Bioenergy and biofuels</p> <p>Unit IV: 06 Bio diversity and its conservation: Introduction – Definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation, Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity</p> <p>Unit V: 06 Environmental pollution: Definition, Cause, effects and control measures of: a. Air pollution b. Water pollution c. Soil pollution d. Marine pollution e. Noise pollution f. Thermal pollution g. Nuclear hazards, Causes, effects and control measures of urban and industrial wastes. Pollution case studies. Solid waste Management</p> <p>Unit VI: 06 Social Issues and Environment: From Unsustainable to Sustainable development, Urban problems related to energy, Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation of people; its problems and concerns. Climate change, global warming, acid rain, ozone layer depletion and Eutrophication, Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and control of Pollution) Act, Wildlife Protection Act, Forest Conservation Act.</p> |

| | | |
|---|---|-----------|
| Content | UNIT I: | 02 |
| | SolidWorks Basics and the User Interface: Design Intent, File References, Opening Files, The Solid Works User Interface | |
| | UNIT II: | 02 |
| | Introduction to Sketching: 2D Sketching, Stages in the Process, Saving Files, What are We Going to Sketch, Sketching, Sketch Entities, Basic Sketching, Rules That Govern Sketches, Design Intent, Sketch Relations, Dimensions, Extrude, Sketching Guidelines | |
| | UNIT III: | 03 |
| | Basic Part Modeling: Basic Modeling, Terminology, Choosing the Best Profile, Choosing the Sketch Plane, Details of the Part, Boss Feature Sketching on a Planar Face, Cut Feature, Using the Hole Wizard, View Options, Filletting, Detailing Basics, Drawing Views, Center Marks, Dimensioning, Changing Parameters | |
| | UNIT IV: | 02 |
| | Modeling a Casting or Forging: Case Study: Ratchet, Design Intent, Boss Feature with Draft, Symmetry in the Sketch Sketching Inside the Model, View Options, Using Model Edges in a Sketch, Creating Trimmed Sketch Geometry, Using Copy and Paste | |
| | UNIT V: | 02 |
| | Patterning: Why Use Patterns?, Reference Geometry, Linear Pattern, Circular Patterns, Mirror Patterns, Using Pattern Seed Only, Sketch Driven Patterns | |
| | UNIT VI: | 02 |
| | Revolved Features: Case Study: Handwheel, Design Intent, Revolved Features, Building the Rim, Building the Spoke, Edit Material, Mass Properties, File Properties, SolidWorks SimulationXpress, Using SolidWorks SimulationXpress, | |
| UNIT VII: | 02 | |
| Shelling and Ribs: Shelling and Ribs, Analyzing and Adding Draft, Other Options for Draft, Shelling, Ribs, Full Round Fillets, Thin Features | | |
| UNIT VIII: | 02 | |
| Editing: repairs: Part Editing, Editing Topics, Sketch Issues, FilletXpert, DraftXpert | | |
| UNIT IX: | 02 | |
| Editing: Design Changes: Part Editing, Design Changes, Information From a Model, Rebuilding Tools, Sketch Contours, Editing with Instant 3D | | |
| UNIT X: | 02 | |
| Configurations: Configurations, Using Configurations, Creating Configurations, Link Values/Equations, Configure Dimension / Feature, Modeling Strategies for Configurations, Editing Parts that Have Configurations, Design Library. | | |
| UNIT XI: | 02 | |
| Design Drawings: More About Making Drawings, Section View, Model Views, Broken View, Detail Views, Drawing Sheets and Sheet Formats, Projected Views, Annotations | | |
| UNIT XII: | 02 | |

| | |
|--------------------------|--|
| | Bottom up assemble modeling: Case Study: Universal Joint, Bottom-Up Assembly, Creating a New Assembly, Position of the First Component, FeatureManager Design Tree and Symbols, Adding Components, Using Part Configurations in Assemblies, Sub-assemblies, Smart Mates Using Assemblies, Analyzing the Assembly, Checking for Clearances, Changing the Values of Dimensions, Exploded Assemblies, Explode Line Sketch, Bill of Materials, Assembly DrawingsInserting Sub-assemblies, Pack and Go. |

| | |
|--------------------------|--|
| Content | <p>UNIT 1: Fundamentals of Inorganic Chemistry 12 Periodic table, atomic and ionic radii, ionization energy, electron affinity, electronegativity and periodicity. Properties and chemical behaviour of s, p, d and f block elements. Chemical Bonding: Valence bond theory and its limitations, directional characteristics of covalent bond, various types of hybridization and shapes of simple inorganic molecules and ions, valence shell electron pair repulsion (VSEPR) theory to NH₃, H₃O⁺, SF₄, ClF₃, ICl₂ and H₂O. Crystal Field Theory (CFT), comparison of the stability of octahedral and tetrahedral complexes on the basis of crystal field stabilization energy (CFSE), factor affecting the magnitude of CFSE, application of crystal field theory. Jahn-Teller effect definition and example from d⁹ and high spin d⁴ systems.</p> <p>UNIT 2: Fundamentals of Organic Chemistry 08 Nomenclature of organic molecules. Aromaticity: Benzenoid and non-benzenoid compounds generation and reactions. Organic reactive intermediates: Generation, stability and reactivity of carbocations, carbanions, free radicals, carbenes, benzynes and nitrenes. Organic reaction mechanisms involving addition, elimination and substitution reactions with electrophilic, nucleophilic or radical species. Important name reactions and rearrangements.</p> <p>UNIT 3: Electrochemistry and Chemical Kinetics 08 Electrochemistry: Introduction, Types of Conductors, Conductance in Electrolytic Solutions, Factor Affecting Conductance, Kohlrausch' law of Independent Migration of Ion. Conductometric titration, Electro Chemical Cell, Electrode Potential and EMF of a Galvanic Cell, Electrochemical Series., Types of Electrode, Batteries. Chemical Kinetics: Introduction, Rate of Reaction, Average Rate and Instantaneous Rate, Rate Law Expression, Rate Constant, Factor Influencing Rate of the Reaction. Order and Molecularity of the Reaction, Zero order, First Order Chemical Kinetics, Half-life of a reaction.</p> <p>UNIT 4: Analytical Techniques in Chemistry 08 Types of Analysis. Separation Techniques, Potentiometry, pH metry, Spectroscopic techniques: UV-Visible spectroscopy, Lambert Beer's Law, principles and applications of UV-Visible spectroscopy, Infrared spectroscopy, Nuclear Magnetic Resonance Spectroscopy.</p> <p>UNIT 5: Applied Chemistry 12 (i) Petroleum Products and Technologies: Petroleum and petrochemicals, Petroleum cracking, reforming, synthetic petrol, knocking in petrol and diesel engines. (ii) Industrial Polymers: Classification of Polymers, Polymer reaction and mechanism of polymerization. Polymerization Techniques, molecular weight of polymers. Commercially important polymers: fibbers, elastomers, adhesives, plastics, vinylic and phenolics, polyesters, polyamide. (iii) Engineering Materials: Cement, Gypsum (CaSO₄.2H₂O), Plaster of Paris (2CaSO₄.H₂O or CaSO₄.1/2H₂O), Lime, Glass, Refractories, Insulating Material.</p> |

| | | |
|--------------------------|--|---|
| | Author | A. M. Tanenbaum, Y. Langsam, M. J. Augenstein |
| | Publisher | Pearson Education |
| | Edition | 1990 |
| Content | <p>Unit – 1 (5 Hours) Introduction: Dynamic aspects of operations on data, Characteristics of data structures, Creation and manipulation of data structures, Operations on data structures, Types of data structures – linear and nonlinear. Introduction to algorithm: Asymptotic notations, Analysis of algorithms: Time and Space complexity.</p> <p>Unit – 2 (7 Hours) Arrays: Dynamic memory allocation, one-dimensional arrays, multidimensional arrays, operations on arrays, storage – Row major order, Column major order. Linked lists: types of linked lists – singly, doubly and circularly linked lists, operations on linked lists.</p> <p>Unit – 3 (8 Hours) Stacks: Implementation of stacks– array and linked list, operations on stacks, Applications of Stacks, Notations – infix, prefix and postfix, Conversion and evaluation of arithmetic expressions using Stacks. Queues: Implementation of queues– array and linked list, operations on queues, Types of queues – queue, double ended queue and priority queue.</p> <p>Unit – 4 (8 Hours) Trees: Binary tree, Binary search tree, Threaded binary tree, Height balanced trees, Tries, Heaps, Hash tables. Graph traversals: Breadth First Search, Depth First Search, Shortest path: Depth first search in directed and undirected graphs. Union-find data structure and applications. Directed acyclic graphs; topological sort.</p> <p>Unit – 5 (8 Hours) Searching: Linear search, Binary search and Hashing. Algorithms and data structures for sorting: Insertion Sort, Bubble sort, Selection Sort, Merge sort, Quick Sort, Heap sort, Radix sort, Bucket sort. Algorithm design techniques: Divide and conquer, Greedy approach, dynamic programming.</p> | |

| Course Title | LINEAR ALGEBRA AND COMPLEX ANALYSIS | | | | |
| Course Coordinator | DR. AMIT MAHAJAN | | | | |
| Course objectives: | This course covers matrix theory and linear algebra, emphasizing topics useful in other disciplines. The concepts of linear algebra are extremely useful in physics, economics and social sciences, natural sciences, and engineering. Also, this course covers basic concepts of complex analysis, such as limit, continuity, differentiability and integration, and also related theorems. | | | | |

| Type of Course | THOERY | | | | |
| Course Title | ENGINEERING VISUALIZATION | | | | |
| Course Coordinator | DR. ABHISHEK MISHRA | | | | |
| Course objectives: | 1. To impart and inculcate proper understanding of the theory of projection. 2. To improve the visualization skills. 3. To enable the students with various concepts like dimensioning, conventions and standards related to working drawings in order to become professionally efficient. 4. To impart the knowledge on understanding and drawing of simple residential/office buildings. | | | | |
| POs | 1. Students will be able to understand the theory of projection. 2. Students will be able to know and understand the conventions and the methods of engineering drawing. 3. Students will be able to improve their visualization skills so that they can apply these skills in developing new products. 4. Students will be able to prepare simple layout of factory buildings. | | | | |

| Content | <p>OVERVIEW: Sketching concepts. Orthographic Projections and views: Principles of Axonometric projections and Development of Isometric, Dimensioning of Orthographic Views, Sectioning in Orthographic views and assembly drawings. Introduction: Overview of the course, Examination and Evaluation patterns.</p> <p>Unit I: 09 Lines Lettering and Dimensioning: Types of lines, Lettering, Dimensioning, Geometrical Constructions, Polygons. Scales: Plain scales, Diagonal scales, Scale of chords.</p> <p>Unit II: 09 Curves used in Engineering Practice: Ellipse, Parabola, Hyperbola, normal and tangents to these curves, Involute, Cycloid, Epi-cycloid, Hypo-cycloid, Spiral, Helix on cone and cylinder.</p> <p>Unit III: 09 Orthographic projection of points: Principles of Orthographic projection, Projections of points. Projections of Lines: Projections of a line parallel to one of the reference planes and inclined to the other, line inclined to both the reference planes, Traces</p> <p>Unit IV: 09 Projections of Planes: Projections of a plane perpendicular to one of the reference planes and inclined to the other, Oblique planes.</p> <p>Unit V: 08 Projections of Solids: Projections of solids whose axis is parallel to one of the reference planes and inclined to the other, axis inclined to both the planes.</p> <p>Unit VI: 08 Section of Solids: Sectional planes, Sectional views - Prism, pyramid, cylinder and cone, true shape of the section.</p> <p>Unit VII: 08 Isometric views: Isometric axis, Isometric Planes, Isometric View, Isometric projection, Isometric views – simple objects. Assembly drawings of the machine parts.</p> <p>NOTE: Interpretation of drawings: Introduction of CAD package to construct a simple solid model, Using a CAD package to construct solid models and generating orthographic, isometric, sectional views with dimensioning, Assembly of components and generation of corresponding drawings. Animation of single of machines in CAD.</p> | |

| Content | UNIT I: System of Coplanar forces: Introduction to coplanar & non-coplanar force system. Forces and their components. Moment of the force about a point, couple. Resultant of coplanar force system - concurrent forces, parallel forces, non-concurrent non-parallel system of forces. | | | | 03 |

| | |
|--------------------------|--|
| | <p>UNIT II: 03 Equilibrium of coplanar force system: Meaning of equilibrium, free body diagrams, equilibrium of concurrent, parallel and non-concurrent non-parallel (general) system of forces. Types of supports, determination of reactions at supports for various types of determinate beams.</p> <p>UNIT III: 03 Forces in Space: Rectangular components of forces in space, Resultant of concurrent forces, moment of a force about a point, moment of a force about a given axis, resultant of general force system, Equilibrium of a particle in space.</p> <p>UNIT IV: 03 Analysis of pin jointed frame/ truss: Perfect truss, Imperfect truss, Analysis of truss by method of joints and method of section.</p> <p>UNIT V: 03 Friction: Laws of friction, angle of friction, angle of repose, cone of friction, Equilibrium of bodies on rough horizontal and inclined plane, application to problems involving wedges, ladder. Belt friction, flat belts on the flat pulleys.</p> <p>UNIT VI: 03 Centroid of Plane Areas: Concept of Centroid of plane areas. Centroid of areas by integration. Centroid of composite areas.</p> <p>UNIT VII: 03 Moment of Inertia: Moment of inertia of plane areas, parallel axis theorem. Introduction to polar moment of inertia, product of inertia and mass moment of inertia.</p> <p>UNIT VIII: 03 Kinematics of Particle: Velocity and acceleration in terms of rectangular coordinate system, rectilinear motion, motion along plane curved path, tangential and normal component of acceleration, acceleration - time, velocity- time, graphs and their use, relative velocity, projectile motion, simple harmonic motion.</p> <p>UNIT IX: 03 Kinematics of rigid bodies: Translation, pure rotation and plane motion of rigid bodies, instantaneous, centre of rotation for velocity for bodies in plane motion, link mechanisms (upto two links)</p> <p>UNIT X: 03 Kinetics of Particles: Newton's laws of motion, D'Alembert's principle, equation of dynamic equilibrium, linear motion, curvilinear motion.</p> <p>UNIT XI: 03 Energy and Momentum Principles: Work done by a force, potential and kinetic energy, power, work energy equation, principle of conservation of energy, momentum, impulse and momentum principle, principle of conservation of momentum, impact of solid bodies, elastic impact, semi-elastic impact and plastic impact.</p> <p>UNIT XII: 03 Kinetics of rigid bodies: D'Alembert's principle for bodies under translational motion, rotational motion about a fixed axis and plane motion. Application to motion of bars, cylinders, spheres.</p> |

| | Edition | |
| 4 | Title | Database System |
| | Author | Hector Garcia-Molina, Jeff Ullman, and Jennifer Widom |
| | Publisher | Pearson |
| | Edition | 2 nd Edition |
| Content | <p>Unit - 1 (4 Hours) Introduction - General introduction to database systems; Database - DBMS distinction, approaches to building a database, data models, database management system, three-schema architecture of a database, challenges in building a DBMS, various components of a DBMS.</p> <p>Unit - 2 (7 Hours) Database design and ER Model:- Overview, ER-Model, Constraints, ER-Diagrams, ERD Issues, weak entity sets, Codd's rules, Relational Schemas, Introduction to UML Relational database model: Logical view of data, keys, integrity rules. Relational Database design: features of good relational database design, atomic domain and Normalization (1NF, 2NF, 3NF, BCNF).</p> <p>Unit - 3 (8 Hours) Relational algebra: introduction, Selection and projection, set operations, renaming, Joins, Division, syntax, semantics. Operators, grouping and ungrouping, relational comparison. Calculus: Tuple relational calculus, Domain relational Calculus, calculus vs algebra, computational capabilities.</p> <p>Unit - 4 (10 Hours) SQL - Introduction, data definition in SQL, table, and key and foreign key definitions, update behaviors. Querying in SQL - basic select-from-where block and its semantics, nested queries - correlated and uncorrelated, notion of aggregation, aggregation functions group by and having clauses, embedded SQL. Data Storage and Indexes - file organizations, primary, secondary index structures, various index structures - hash-based, dynamic hashing techniques, multi-level indexes, and B+ trees.</p> <p>Unit - 5 (7 Hours) Transaction management and Concurrency control: Transaction processing and Error recovery - concepts of transaction processing, ACID properties, and serializability concurrency control, Lock based concurrency control (2PL, Deadlocks), Time stamping methods, optimistic methods, and database recovery management. Error recovery and logging, undo, redo, undo-redo logging and recovery methods.</p> | |

| Course Title | SIGNALS AND SYSTEMS | | | | |
| Course Coordinator | DR. RAJIV KUMAR TRIPATHI | | | | |
| Course objectives: | Coverage of continuous and discrete-time signals and systems, their properties and representations and methods those are necessary for the analysis of continuous and discrete-time signals and systems. Knowledge of time-domain representation and analysis concepts as they relate to difference equations, impulse response and convolution, etc. Knowledge of frequency-domain representation and analysis concepts using Fourier Analysis tools, Z-transform. Mathematical and computational skills needed in application areas like communication, signal processing and control, which will be taught in other courses | | | | |
| POs | Characterize and analyze the properties of CT and DT signals and systems Analyze CT and DT systems in Time domain using convolution. Represent CT and DT systems in the Frequency domain using Fourier Analysis tools like CTFS, CTFT, DTFS and DTFT. Conceptualize the effects of sampling a CT signal Analyze CT and DT systems using Laplace transforms and Z Transforms. | | | | |

| | Edition | |
| Content | <p>Unit I: 06</p> <p>What is Signal and System Theory? The black-box approach. Formal definition of 'signal' and 'system'. The domain and range variables, continuous and discrete signals and cont. and discrete systems. Signal operations: folding, Shifting, scaling for Continuous and Discrete Time Signal. Characterization of systems: memory, linearity, causality, time-invariance, stability and Invertibility. Condition on Impulse response of a system for an LTI system for memory, linearity, causality, time-invariance, stability, Invertibility.</p> <p>Unit II: 08</p> <p>Periodic signals: definition, periodicity of the sum of two signals, Orthogonal functions, Sinusoidal Fourier Series, Derivation of Fourier coefficient of sinusoidal series, continuous-time complex exponential Fourier Series. Relationship between Fourier coefficient of Sinusoidal and Exponential Fourier Series, Signal approximation using truncated Fourier series. Brief discussion of convergence issues and conditions for existence of the CTFS. Aperiodic signals and their representation: the transition from the CTFS to the Continuous Time Fourier Transform (CTFT). Finite power and finite energy signals. Brief discussion of convergence issues and conditions for existence of the FT. Extension of the FT for finite power signals: frequency domain Dirac impulses. Properties of the FS and FT: particular emphasis on convolution.</p> <p>Unit III: 08</p> <p>A discussion of the discrete-time complex exponential. Discrete time systems and complex exponentials. Periodic discrete signals: sampling periodic continuous time signals. Periodic signal as a sum of complex exponentials. The discrete-time Fourier series: analysis and synthesis equations. The DFT: N-point DFT of an M-point signal. Aperiodic signals and their representation: the transition from the DTFS to the discrete-time Fourier Transform. Finite power and finite energy signals. Brief discussion of convergence issues and conditions for existence of the DTFT. Extension of the DTFT for finite power signals: frequency domain Dirac impulses. Properties of the DTFS and DTFT: particular emphasis on convolution.</p> <p>Unit IV: 08</p> <p>The principle of cont. signal sampling. The primary objective: perfect reconstruction. Ideal sampling and the sampling theorem: over- and under-sampling. Reconstruction theory: finite order interpolators and reconstruction distortion; ideal reconstruction. Non-ideal sampling and</p> | |

| | |
|--------------------------|--|
| | <p>reconstruction. Sampling of discrete-time signals.</p> <p>Unit V: 06</p> <p>Laplace Transform as a generalization of the FT. The region of convergence and its properties. Pole-zero plots. Inverse transformation: role of the ROC in ensuring uniqueness. Properties of the LT. Inference of the FT from the LT. System characterization from the pole-zero plots. One-sided LT. The z-Transform as a generalization of the DTFT. The region of convergence and its properties. Pole-zero plots. Inverse transformation: role of the ROC in ensuring uniqueness. Properties of the ZT. Inference of the DTFT from the LT. System characterization from the pole-zero plot. Cont. to discrete system transformations. One-sided ZT.</p> <p>Tentative List of Experiments:</p> <ol style="list-style-type: none"> 1. Matlab Basics, Independent and dependent variable and function generation 2. Signal Generation: Such as unit impulse, unit step, Sinusoidal, exponential and others. 3. To create user function for performing signal operations: folding, Shifting, scaling, addition for continuous and discrete time signal. 4. Convolution and its properties for continuous and discrete time signal. 5. Implementation of Continuous Time Fourier Series (CTFS) of continuous periodic time signals. 6. Properties of CTFS and implementation of Discrete Time Fourier Series (DTFS) of Discrete periodic time signals. 7. Properties of DTFS. 8. Implementation of Discrete Time Fourier Transform (DTFT) of discrete time aperiodic signals. 9. Properties of DTFT. 10. Implementation of Discrete Fourier Transform (DFT) of discrete time signals. |

| Course Title | THEORY OF COMPUTATION | | | | |
| Course Coordinator | | | | | |
| Course objectives: | The objective of the course is to provide an exposition first to the notion of computability, then to the notion of computational feasibility or tractability. | | | | |
| | We first convince ourselves that for our purpose it suffices to consider only language recognition problems instead of general computational problems. | | | | |
| | We then provide a thorough account of finite state automata and regular languages, not only because these capture the simplest language class of interest and are useful in many diverse domains. | | | | |
| | But also because many fundamental notions like nondeterminism, proofs of impossibility, etc. get discussed at a conceptually very simple level. We then consider context grammars and languages, and their properties. | | | | |
| | Next, we consider Turing machines (TMs), show that as a model it is very robust, and the reasonableness of the Church-Turing hypothesis. After we realize TMs can work with (codes of) TMs as inputs, we obtain a universal TM. | | | | |
| | We then obtain the separation of the classes r.e., and recursive. A number of TM related problems are shown to be undecidable. Next, Post's correspondence problem (PCP) is shown undecidable. | | | | |
| | Finally, we introduce the notion of feasible or tractable computation. Classes NP, co-NP are defined and we discuss why these are important. We discuss the extended Church-Turing hypothesis. | | | | |
| | After we discuss polynomial time many-one reducibility and prove Cook-Levin theorem, a number of natural problems from different domains are shown NP-complete. | | | | |
| The treatment is informal but rigorous. Emphasis is on appreciating that the naturalness and the connectedness of all the different notions and the results that we see in the course. | | | | | |

| | Author | C. H. Papadimitriou, H. Lewis |
| | Publisher | Prentice Hall |
| | Edition | 1981 |
| 5 | Title | Introduction to Languages and the Theory of Computation |
| | Author | J. C. Martin |
| | Publisher | Mc Graw Hill |
| | Edition | 2002 |
| 6 | Title | Computers & Intractability |
| | Author | M. R. Garey and D. S. Johnson |
| | Publisher | W. H. Freeman & Co., San Francisco |
| | Edition | 1979 |
| 7 | Title | A Course on Mathematical Logic |
| | Author | S. M. Srivastava |
| | Publisher | Springer |
| | Edition | 2008 |
| Content | Unit – 1 (8 Hours) | |
| | Regular languages | |
| | Introduction: Scope of study as limits to compubality and tractability. Why it suffices to consider only decision problems, equivalently, set membership problems. Notion of a formal language. DFAs and notion for their acceptance, informal and then formal definitions. Class of regular languages. | |
| | Closure of the class under complementation, union and intersection. Strategy for designing DFAs. | |
| | Pumping lemma for regular languages. Its use as an adversarial game. | |
| Generalized version. Converses of lemmas do not hold. | | |

| | |
|--------------------------|---|
| | NFAs. Notion of computation trees. Definition of languages accepted. Construction of equivalent DFAs of NFAs. NFAs with epsilon transitions. Guess and check paradigm for design of NFAs. |
| | Regular expressions. Proof that they capture precisely class of regular languages. Closure properties of and decision problems for regular languages. |
| | Myhill-Nerode theorem as characterization of regular languages. States minimization of DFAs. |
| | Unit – 2 (8 Hours) Context free languages |
| | Notion of grammars and languages generated by grammars. Equivalence of regular grammars and finite automata. Context free grammars and their parse trees. Context free languages. Ambiguity. |
| | Pushdown automata (PDAs): deterministic and nondeterministic. Instantaneous descriptions of PDAs. Language acceptance by final states and by empty stack. Equivalence of these two. |
| | PDAs and CFGs capture precisely the same language class. |
| | Elimination of useless symbols, epsilon productions, unit productions from CFGs. Chomsky normal form. |
| | Pumping lemma for CFLs and its use. Closure properties of CFLs. Decision problems for CFLs. |
| | Unit – 3 (8 Hours) |
| | Turing machines, r.e. languages |
| | Informal proofs that some computational problems cannot be solved. |
| | Turing machines (TMs), their instantaneous descriptions. Language acceptance by TMs. Hennie convention for TM transition diagrams. Robustness of the model-- equivalence of natural generalizations as well as restrictions equivalent to basic model. Church-Turing hypothesis and its foundational implications. |
| | Codes for TMs. Recursively enumerable (r.e.) and recursive languages. Existence of non-r.e. languages. |
| | Unit – 4 (7 Hours) Undecidability |
| | Notion of undecidable problems. Universal language and universal TM. Separation of recursive and r.e. classes. Notion of reduction. Some undecidable problems of TMs. Rice's theorem. Undecidability of Post's correspondence problem (PCP), some simple applications of undecidability of PCP. |
| | Unit – 5 (5 Hours) Intractability |
| | Notion of tractability/feasibility. The classes NP and co-NP, their importance. Polynomial time many-one reduction. Completeness under this reduction. Cook-Levin theorem: NP-completeness of propositional satisfiability, other variants of satisfiability. NP-complete problems from other domains: graphs (clique, vertex cover, independent sets, Hamiltonian cycle), number problem (partition), set cover. |

| Course Title | OPERATING SYSTEM | | | | |
| Course Coordinator | | | | | |
| Course objectives: | The learning objective of this course is to provide an introduction to the internal operation of modern operating systems. In particular, the course will cover processes and threads, mutual exclusion, CPU scheduling, deadlock, memory management, and file systems. If time permits, we may briefly examine networking and distributed computing, and perhaps other topics. Students will use the Nachos (Not Another Completely Heuristic Operating System) instructional operating system for several programming projects. | | | | |
| POs | By the end of the course you should be able to <ul style="list-style-type: none"> • describe the general architecture of computers • describe, contrast and compare differing structures for operating systems • Understand and analyse theory and implementation of: processes, resource control (concurrency etc.), physical and virtual memory, scheduling, I/O and files | | | | |

| Course Title | Engineering Economics and Accountancy | | | | |
| Course Coordinator | Dr. Shakira Khan | | | | |
| Course objectives: | The subject will provide the knowledge of economics, finance and accountancy for the better decision making of the economic alternatives and investment alternatives in the field of engineering and anywhere else. | | | | |
| POs | To enhance the students with the knowledge of Economic, Market, Accountancy and Engineering for future development and practical implication in the professional wellbeing. | | | | |
| Syllabus outcome: | <p>Engineering economics is a subset of economics for application to engineering projects. Engineers seek solutions to problems, and the economic viability of each potential solution is normally considered along with the technical aspects. Fundamentally, engineering economics involves formulating, estimating, and evaluating the economic outcomes when alternatives to accomplish a defined purpose are available.</p> <p>Engineering economics is a field that addresses the dynamic environment of economic calculations and principles through the prism of engineering. It is a fundamental skill that all successful engineering firms employ in order to retain competitive advantage and market share.</p> | | | | |

| | Edition | 2013 |
| 2 | Title | Financial Management |
| | Author | Tulsian P.C. |
| | Publisher | S. Chand and Company Pvt. Ltd. |
| | Edition | 2009 |
| Content | <p>Course Content</p> <p>Unit I: Engineering Economics Introduction to Engineering Economics – Fundamental concepts-Time value of money – Cash flow and Time Diagrams – Choosing between alternative investment proposals. (6 hours)</p> <p>Unit II: Capital Budgeting Methods of Economic analysis (Pay back, ARR, NPV, IRR and B/C ratio). Depreciation and methods of calculating depreciation (Straight line, Sum of the years digit method, Declining Balance Method, Annuity Method, Sinking Fund method.) (7 hours)</p> <p>Unit III: Indian economy and Economic Development National Income Accounting – Methods of Estimation – Various Concepts of National Income – Significance of National Income Estimation and its limitations. Inflation: Definition- Measures to Control (Monetary and Fiscal policy). New Economic Policy 1991 Breakeven Analysis – Meaning and its application, Limitation. (8 hours)</p> <p>Unit IV: Financial Accounting: Accounting Principles, procedure-Double entry system – Journal, ledger, Trial balance – Cash Book – Preparation of Trading and Profit and Loss account – Balance Sheet. Cost Accounting - Introduction-Classification of costs – Methods of Costing-Techniques of Costing. E-commerce: Importance and Need. (8 hours)</p> | |

| | |
|--------------------------|---|
| | <p>Unit V: Managerial Economics</p> <p>Scope of Managerial Economics: Theory of Demand and Theory of Supply. Law of demand and Law of Supply. Techniques of Managerial Economics; Theory of firm, Theory of Market Structure. Applications of Managerial Economics.</p> <p>(7 hours)</p> |
| Course Assessment | <p>Continuous Evaluation: 20%</p> <p>Mid Semester: 30%</p> <p>End Semester: 50%</p> |

| | Publisher | Pearson |
| | Edition | 8th Edition, 2007 |
| Content | <p>Unit - 1 Introduction: history and development of computer networks, Basic Network Architectures: OSI reference model, TCP/IP reference model, and Networks topologies, types of networks (LAN, MAN, WAN, circuit switched, packet switched, message switched, extranet, intranet, Internet, wired, wireless)</p> <p>Unit - 2 Physical layer: line encoding, block encoding, scrambling, modulation demodulation (both analog and digital), errors in transmission, multiplexing (FDM, TDM, WDM, OFDM, DSSS), Different types of transmission media. Data Link Layer services: framing, error control, flow control, medium access control. Error & Flow control mechanisms: stop and wait, Go back N and selective repeat. MAC protocols: Aloha, slotted aloha, CSMA, CSMA/CD, CSMA/CA, polling, token passing, scheduling.</p> <p>Unit - 3 Local Area Network Technology: Token Ring. Error detection (Parity, CRC), Ethernet, Fast Ethernet, Gigabit Ethernet, Personal Area Network: Bluetooth and Wireless Communications Standard: Wi-Fi (802.11) and WiMAX,</p> <p>Unit - 4 Network layer: Internet Protocol, IPv6, ARP, DHCP, ICMP, Routing algorithms: Distance vector, Link state, Metrics, Inter-domain routing. Subnetting, Supernetting, Classless addressing, Network Address Translation.</p> <p>Unit - 5 Transport layer: UDP, TCP. Connection establishment and termination, sliding window, flow and congestion control, timers, retransmission, TCP extensions, Queuing theory, Single and multiple server queuing models, Little's formula. Application Layer. Network Application services and protocols including e-mail, www, DNS, SMTP, IMAP, FTP, TFTP, Telnet, BOOTP, HTTP, IPSec, Firewalls.</p> | |

| Course Title | NETWORK SECURITY AND CRYPTOGRAPHY | | | |
| Course Coordinator | | | | |
| Course objectives: | This course aims at training students to master the basic principles, knowledge, and skills about network security. They will learn how to apply cryptography as a tool for maintaining confidentiality along with hash functions and digital signatures helping in message integrity and authentication. They will learn how to apply these principles in various scenarios in real life by using appropriate hardware and software tools to design solutions for network management and security problems, and to evaluating its performance. | | | |
| Pos | Upon completion of the subject, students will be able to <ul style="list-style-type: none"> ● Acquire professional/academic knowledge and skills ● Describe some common problems or attacks on network security ● Describe some network security services and mechanisms ● Study and analyze some cryptographic algorithms with their relation with real life. | | | |

| | Edition | |

| | |
|---|--|
| Content | Unit - 1 Network Security, Attacks on network security- passive and active attacks, Services used to handle these attacks and related Mechanisms, A model for network security. |
| | Conventional Encryption , Classical Techniques- substitution and transposition ciphers, study of basic cryptanalysis possible on classical ciphers, Modern Techniques- block and stream ciphers, Block cipher Design Principles, Feistel structure, Shannon's principles of diffusion and confusion, Encryption algorithms, The Data Encryption Standard (DES) block cipher algorithm with its strength and weaknesses. |
| | Unit - 2 Introduction to Number Theory: Divisibility theory in integers. Extended Euclid's algorithm. Modular Arithmetic - exponentiation and inversion. Fermat's Little Theorem, Euler's Theorem. Solution to congruence's, Chinese Remainder Theorem. Review of abstract algebra - Study of Ring Z_n , multiplicative group Z_n^* and finite field Z_p - Gauss Theorem (cyclicity of Z_p^*) - Quadratic Reciprocity. Primality Testing - Fermat test, Carmichael numbers, SolovayStrassen Test, Miller Rabin Test - analysis |
| | Unit - 3 Asymmetric cryptography: Public Key Encryption, The RSA algorithm, its strengths, possible cryptanalysis attacks possible on RSA such as timing attacks and CCA, Diffie - Hellman Key Exchange algorithm, Introduction to cryptographic hash algorithms. |
| | Unit - 4 Message Authentication: Authentication Requirements, Authentication Functions, Message Authentication Codes, Digital Signatures and Authentication Protocols, Digital Signature Standard (DSS), Key distribution and Management using symmetric and asymmetric encryption, X. 509 certificates. |
| Unit - 5 Network security: Electronic Mail Security-PGP and S/MIME, IP Security, IP security Overview, IP Security Architecture, Authentication Header (AH), Encapsulating Security Payload (ESP), Firewalls, Firewall Design Principles, Trusted Systems. | |

| | |
|----------------|--|
| Content | Unit – 1 Introduction to Cloud Computing: Nutshell of cloud computing, feature Characteristics and components of Cloud Computing. Challenges, Risks and Approaches of Migration into Cloud. Evaluating the Cloud's Business Impact and economics, Future of the cloud. |
| | Unit –2 Networking Support for Cloud Computing. Ubiquitous Cloud and the Internet of Things. Cloud Computing Architecture: Cloud Reference Model, Layer and Types of Clouds, Services models, Data center Design and interconnection Network, Architectural design of Computer and Storage Clouds. |
| | Unit – 3 Cloud Programming and Software: Fractures of cloud programming, Parallel and distributed programming paradigms, High level Language for Cloud. Introduction to Map Reduce, GFS, HDFS, Hadoop Framework. |
| | Unit – 4 Virtualization Technology: Definition, Understanding and Benefits of Virtualization. Implementation Level of Virtualization, Virtualization Structure/Tools and Mechanisms, Hypervisor, VMware, KVM, Xen. Virtualization of CPU, Memory, I/O Devices, Virtual Cluster and Resources Management, Virtualization of Server, Desktop, Network, and Virtualization of data-center. |

| | |
|--------------------------|---|
| | Unit - 5 Web-Based Application, Pros and Cons of Cloud Service Development, Types of Cloud Service Development, Software as a Service, Platform as a Service, Web Services, On-Demand Computing, Discovering Cloud Services, Development Services and Tools, Amazon Ec2, GoogleApp Engine, IBM Clouds. |

| | |
|--------------------------|---|
| Content | Unit - 1 Introduction: Internet architecture and performance modeling: Review of Basic Network Architectures: OSI reference model, TCP/IP reference model, ATM reference model. Physical Layer: Different types of transmission media, and errors in transmission: attenuation, noise. Repeaters. Traffic Characterization (CBR, VBR); |
| | Unit - 2 Switching Paradigms; Multiplexing. Error Control, Flow Control, FTH, DTH, PON, ISDN, DSL, CATV, SONET, Optical Networks. Link layer: switching, multiple access, error recovery: Data Link Layer MAC Layer: Local Area Network Technologies: Fast Ethernet, Gigabit Ethernet, IEEE 802.11 WLAN, Bluetooth, Connecting LANs, VLANs, STP. |
| | Unit - 3 Network Device, Routing algorithms, BGP, Advanced routing concepts, Router architectures, internetworking: Interdomain Routing, BGP, IPv6, Multicast Routing Protocols, Multi Protocol Label Switching, and Virtual Networks. Transport layer Transport protocols, TCP mechanics, congestion control, resource allocation UDP mechanics. Socket Programming. |
| | Unit - 4 High speed transport protocols, Quality of Service Mechanisms, Improving QoS in Internet, DiffServ and IntServ Architectures, RSVP. Distributed Systems: Naming, DNS, DDNS, Paradigms for Communication in Internet, Caching, Issues of Scaling in Internet and Distributed Systems, Caching Techniques for Web, Protocols to Support Streaming Media, Multimedia Transport Protocols, Content Delivery Networks, Overlay and P2P Networks. |
| | Unit - 5 Applications: architectures and examples. Network virtualization, software defined networking Applications and Other Networking Technologies: RTP, RTSP, SIP, VoIP, Security Systems, SSH, PGP, TLS, IPSEC, DoS Attack, Mitigation in Internet, Security in MPLS. |

| Course Title | ADVANCED DATABASE MANAGEMENT SYSTEMS | | | | |
| Course Coordinator | | | | | |
| Course objectives: | This course provides in depth exploratory skills in distributed and parallel databases. It covers a number of advanced topics like query optimization including online query and adaptive query processing. The specific topics include advanced transaction models and models of spatial data. | | | | |
| Pos | At the end of the course student will be able <ol style="list-style-type: none"> 1. Evaluate and apply advanced database development techniques. 2. Design conceptual and logical data models. 3. Identify, describe and categorize transaction. | | | | |

| Course Title | SOFTWARE QUALITY AND TESTING | | | | |
| Course Coordinator | | | | | |
| Course objectives: | <p>The main objective of the course is to impart students the knowledge and learning about software quality and software testing. This course introduces the concepts and methods required for effective and efficient SQA. It aims to develop a broad understanding of SQA processes from planning until execution. Students will learn in detail about various quality assurance models and understand the audit and assessment procedures to achieve quality. It goes further to underline testing mechanisms that can be applied throughout the software development life cycle to reduce defects and resolve root-cause problems in the development process to prevent defects from occurring. Software testing principles, strategies and techniques will be explained to students in detail.</p> | | | | |
| POs | <p>At the end of the course student will be able</p> <ul style="list-style-type: none"> • to understand software quality process and SQA • to understand how to detect, classify, prevent and remove defects • to perform various testing techniques to improve software quality • to conduct formal inspections, record and evaluate results of inspections • to distinguish between the various activities of quality assurance, quality planning and quality control and understand quality models • to identify risks for quality improvement | | | | |

| | |
|----------------|---|
| Content | Unit-1 Artificial Neural Networks: Basic concepts of artificial neural networks, Earlier neural networks: ADALINE, MADALINE. Neural Network Architectures: Single layer feedforward network, Multi layer feedforward network, Recurrent network. |
| | Unit-2 Supervised Learning Network: Perceptron network,Back propagation network,Radial basis function network. Unsupervised Learning Network: Fixed weight competitive nets, Kohonen self organizing feature maps, Counter propagation network, Adaptive reasoning theory. Associative memory: Autoassociative memory network, Hetroassociative memory network, Bidirectional associative memory, Hopfield networks. |
| | Unit-3 Fuzzy Logic: Crisp set and Fuzzy set, Basic concepts of fuzzy sets, Fuzzy set operations, Fuzzy Arithmetic-fuzzy numbers, Fuzzy ordering,Fuzzy vectors. Fuzzy measures-belief and plausibility measure. Probability measure- Measure of fuzziness, Fuzzy integrals. Membership functions: Features of membership function, Fuzzification. Fuzzy Rule Based Systems: Fuzzy proposition, Formation and decomposition of rules, Fuzzy reasoning, Fuzzy inference systems, Fuzzy expert system. Defuzzification: Max-membership, Centroid method, Weighted average, Mean max. |
| | Unit-4 Genetic Algorithms: Traditional optimization and search techniques, Genetic algorithms. Operators: Encoding, Selection, Crossover, Mutation. Classification: Adaptive genetic algorithms, Hybrid genetic algorithms, Parallel genetic algorithms, Real coded genetic algorithm. |

| | |
|--------------------------|---|
| | Unit-5 Hybrid Systems: Neuro fuzzy hybrid systems, Adaptive neuro-fuzzy inference systems, Fuzzy backpropagation network, Genetic neuro hybrid system, Genetic algorithm based backpropagation network, Genetic-fuzzy hybrid systems. |

| Course Title | DIGITAL IMAGE PROCESSING | | | | |
| Course Coordinator | | | | | |
| Course objectives: | The course aims to cover techniques and tools for digital image processing, image transformation in spatial and frequency domains. It introduces image analysis techniques in the form of image segmentation. The course also aims to cover the processing of colored images. The course also aims to cover techniques and tools for digital image processing, and to provide hands-on experience in applying these tools to process images. The students would be encouraged to develop the image processing tools from scratch, rather than using any image processing library functions. Students will also get an opportunity to familiarize with image processing platforms such as Open CV, MATLAB etc.. | | | | |
| Pos | At the end of the course student will be able <ul style="list-style-type: none"> • describe the fundamental concepts and process flow of digital image processing • appropriately apply digital image processing techniques to real world applications • design and implement various algorithms for digital image processing • enhance their critical thinking skills | | | | |

| Course Title | PATTERN RECOGNITION | | | | |
| Course Coordinator | | | | | |
| Course objectives: | The objective of the course is to understand the algorithms for Pattern Recognition. The representation of patterns and classes and the similarity measures are an important aspect of pattern recognition. Pattern recognition involves classification and clustering of patterns. The two well-known paradigms of machine learning namely, learning from examples or supervised learning and learning from observations or clustering covered in this course. When the data sets are very large it is meaningful to reduce the data and use this reduced data for pattern classification. The details of feature extraction and feature selection are also covered in this course. | | | | |
| Pos | <p>At the end of the course student will be able to</p> <ul style="list-style-type: none"> • design systems and algorithms for pattern recognition • analyze a given pattern recognition problem, and determine which algorithm to use • modify existing algorithms to engineer new algorithms • solve a particular problem at hand from a wide variety of application domains <p>gain a working knowledge of some of the most recent developments in pattern recognition, such as incremental learning and learning in nonstationary environments</p> | | | | |

| Content | <p>Unit-1 Introduction to C++ and Object oriented Concepts (7 hrs) Introduction to Objects and Object Oriented Programming, Encapsulation (Information Hiding), Access Modifiers: Controlling access to a class, method, or variable (public, protected, private, package), Other Modifiers, Polymorphism: Overloading, Inheritance, Overriding Methods, Abstract Classes, Reusability, Class's Behaviors. Basics of a Typical C++ Environment, Pre-processors Directives, illustrative Simple C++ Programs. Header Files and Namespaces, library files</p> <p>Unit-2 Classes and Data Abstraction (8 hrs) Introduction, Structure Definitions, Accessing Members of Structures, Class Scope and accessing Class Members, Separating Interface from Implementation, Controlling Access Function And Utility Functions, Initializing Class Objects: Constructors, Using Default Arguments With Constructors, Using Destructors, Classes : Const(Constant) Object And Const Member Functions, Object as Member of Classes, Friend Function and Friend Classes, Using This Pointer, Dynamic Memory Allocation with New and Delete, Static Class Members, Container Classes And Integrators, Proxy Classes, Function overloading.</p> <p>Unit-3 Operator Overloading and Inheritance (8 hrs) Fundamentals of Operator Overloading, Restrictions On Operators Overloading, Operator Functions as Class Members vs. as Friend Functions, Overloading, Overloading Unary Operators, Overloading Binary Operators. Introduction to Inheritance, Base Classes And Derived Classes, Protected Members, Casting Base-Class Pointers to Derived- Class Pointers, Using Member Functions, Overriding Base – Class Members in a Derived Class, Public, Protected and Private Inheritance</p> <p>Unit-4 Virtual Functions, Polymorphism, files and I/O stream(6 hrs) Introduction to Virtual Functions, Abstract Base Classes And Concrete Classes, virtual base class, Polymorphism, pure virtual functions. Streams and formatted I/O, I/O manipulators , file handling, random access, object serialization, namespaces, std namespace, ANSI String Objects , standard template library.</p> <p>Unit-5 Templates and Exception Handling (7 hrs) Function Templates, Overloading Template Functions, Class Template, Class Templates and Non-Type Parameters. Basics of C++ Exception Handling: Try Throw, Catch, Throwing an Exception, Catching an Exception, Rethrowing an Exception, Exception specifications, Processing Unexpected Exceptions, Stack Unwinding, Constructors, Destructors and Exception Handling, Exceptions and Inheritance.</p> | |

| Course Title | BIOMEDICAL IMAGE PROCESSING | | | | |
| Course Coordinator | | | | | |
| Course objectives: | This course aims to provide students with broad theoretical and practical skills in biomedical image processing, including skills relevant to general image processing. The fundamentals of computational medical image processing will be explored, starting from basic acquisition and leading to current trends in applying geometry and statistics to segmentation, registration, visualization, and image understanding. | | | | |
| POs | At the end of the course students will be able to <ul style="list-style-type: none"> · explain the basic principles and medical applications of the major biomedical imaging techniques · design and implement programs to enhance / denoise biomedical images, segment them into meaningful parts · design and implement programs to extract meaningful information from biomedical image data for various medical applications | | | | |

| Course Title | Information Theory and Coding | | | | |
| Course Coordinator | | | | | |
| Course objectives: | This course covers information theory and coding within the context of modern digital communications applications. Main objective is to understand the fundamental limits of communication systems. Information theoretic concepts underlie virtually all modern communication systems, and some exposure to information theory is definitely required for students who want to pursue research in communications | | | | |
| Pos | At the end of the course student will be able to <ul style="list-style-type: none"> ● evaluate the information rate of various information sources ● select and design simple convolutional codes ● evaluate the information capacity of discrete memoryless channels and determine possible code rates to achievable on such channels ● design lossless data compression codes for discrete memoryless sources ● understand information theoretic security issues | | | | |

| | | |
|--------------------------|---|-----------------------------------|
| | Author | Jingming Li Salina, Pascal Salina |
| | Publisher | John Wiley Publications |
| | Edition | 2008 |
| Content | <p>UNIT I (6 Hrs.)</p> <p>Convergence: what is convergence and why is it possible now? Network convergence, service convergence, device convergence, convergence in content. From technology push to service pull. Introduction to Next Generation Networks (NGN): what is NGN? Evolution trends in ICT network platform towards NGN. Difference between existing telecommunication environment and next generation converged environment. Factors motivating NGN: economic, technological and social. Building blocks for NGN. NGN services, challenges, opportunities. NGN applications: Internet connectivity, e-commerce, call center, third party application service provision, integrated billing, security and directory enable networks.</p> <p>UNIT II (13 Hrs.)</p> <p>NGN: numbering, naming and addressing. Conceptual model for NGN: access layer, transport layer, control layer, service layer. NGN architecture: softswitch based, IMS based and TISPAN. IMS architecture: nodes, S-CSCF, P-CSCF, I-CSCF, application servers, BGCF, PSTN/CS gateway, media resource functions. IMS advantages. NGN protocol stack: fundamental protocols: SIP, SDP, AAA, RTP, RTCP, Megaco/H.248. Supporting protocols: XCAP, SOAP. Fixed mobile convergence (FMC). Convergence using IMS- a case study. IMS based NGN IPTV architecture.</p> <p>UNIT III (10 Hrs.)</p> <p>Next generation access network: wireline: fiber to the premises (FTTP), long-haul managed Ethernet. Broadband wireless access: Local area network (Wi-Fi), Wide area network (WiMAX), satellite networks, and mobile networks: 3G, 4G, LTE, and 5G. Next generation core network: role of core network, enabling control and reconfigurability. VoIP: principles, how telephony is provided over IP network, various VoIP scenarios.</p> <p>UNIT IV (7 Hrs.)</p> <p>NGN management and provisioning- configuration, accounting, performance and security. Future enhancements- adaptive self healing networks. Software defined networking (SDN): basic concepts, SDN software stack. Applications: network virtualization, data-center traffic management, wide area traffic management. SDN systems challenges: scalability, security, fault tolerance. Future of SDN.</p> | |

| Course Title | GAME THEORY | | | | |
| Course Coordinator | | | | | |
| Course objectives: | <p>Game theory is a branch of Mathematical Economics that studies strategic interactions amongst rational decision makers. Traditionally, game theoretic tools have been applied to solve problems in Economics, Business, Political Science, Biology, Sociology, Computer Science, Logic, and Ethics. In recent years, applications of game theory have been successfully extended to several areas of engineered / networked system such as wireline and wireless communications, static and dynamic spectrum auction, social and economic networks.</p> <p>This course is intended to provide students with a comprehensive treatment of game theory with specific emphasis on applications in Economics and Engineering.</p> <p>The aim of this course is to introduce students to the novel concepts of Game Theory with special emphasis on its applications in diverse fields and current research.</p> | | | | |

| | Publisher | New Delhi: McGraw Hills Education | | | |
| | Edition | 2005 | | | |
| Content | <p>Unit I: WRITTEN COMMUNICATION Writing Resume, Curriculum Vitae, and Bio-data (Design, Style); Writing Cover letter; Job Applications, Statement of Purpose (SoPs), Life Essay etc.</p> <p>Writing Technical Correspondences: Report Writing, Process Writing, Technical Description: Instructions, manuals etc. Proposals writing,</p> | | | | |

| | |
|--------------------------|---|
| | <p>Journal Articles and Conference Papers, Review and Research Articles. (Focus would be given to Grammar, Foreign Words & Phrases, Appropriate use of Prepositions and other aspects).</p> <p>Unit II: ORGANISATIONAL COMMUNICATION</p> <p>Samples of technical letters (Letter of Inquiry, Replies to Inquiry Letters, Letters Placing Orders, Instruction Letters, Letters Urging Action, Complaint Letters, and Adjustment Letters), E-mail Correspondences: Format, Standard Practices and Strategies</p> <p>Unit III: PRESENTATION SKILLS</p> <p>Oral presentation Skills: How to make presentation (Focus on Paralinguistic features of speech: Pause, Voice, Stress, and Intonation etc. and Non-verbal cues: Body-language etc.).</p> <p>Preparing the Presentation: Develop the central idea, main ideas and supporting materials, visual aids.</p> <p>Rehearsing the presentation: Improving Delivery and handling stage Fright</p> <p>Unit IV: Group Discussion Skills</p> <p>Techniques for Group Discussion</p> <p>Subject Knowledge, Communication Skills, Leadership Skills, Group Behaviour</p> <p>Group Contribution: Contributing Systematically; Creating Cooperative Environment, Optimal Participation, Handling Conflict, Effective Closure</p> <p>Individual Contribution: Topic analysis; Discussing Opinion, Problems, Case Studies</p> <p>Exchanging Opinions, Suggestions and Proposals</p> <p>Unit V: Job Interviews</p> <p>Pre-interview Presentation Techniques</p> <p>Self-Analysis, Research the Organisation</p> <p>Job Analysis, Revise your Subject Knowledge, Develop your Interview file.</p> <p>Interview questions: types, Answering Strategies</p> <p>Good manners and Positive Behaviour</p> |

| Course no: CSL 373 | Open course (YES/NO) | HM Course (Y/N) | DC (Y/N) | DE (Y/N) | |
| | | | | | |
| Type of course | PC | | | | |
| Course Title | COMPUTER GRAPHICS | | | | |
| Course Coordinator | | | | | |
| Course objectives: | <p>Emphasize basic principles needed to design, use, and understand computer graphics systems.</p> <p>Discuss both hardware and software components of graphics systems.</p> <p>Implementation of Graphics Algorithms.</p> | | | | |
| POs | <p>At the end of the course student will be able</p> <p>1. Digitally synthesize and manipulate visual content.</p> <p>2. Determine effectiveness of the theories and programs related to the computer graphics.</p> | | | | |

| Text Books: | | | | | |
| 1 | Title | Computer graphics C Version | | | |
| | Author | Donald Hearn and M. Pauline Baker | | | |
| | Publisher | Pearson | | | |
| | Edition | 2 nd Edition 2014 | | | |
| Reference Book: | | | | | |
| 2. | Title | Computer Graphics-Principles and Practice | | | |
| | Author | J. D. Foley, A. Van Dam, S. K. Feiner and J. F. Hughes | | | |
| | Publisher | Pearson Education | | | |
| | Edition | 2 nd Edition, 2003 | | | |
| 3. | Title | Procedural Elements of Computer graphics | | | |
| | Author | David F. Rogers | | | |
| | Publisher | McGraw Hill | | | |

| | | |
|--------------------------|---|---|
| | r | |
| | Edition | 2 nd Edition, 1998 |
| 4. | Title | Computer Graphics: A programming approach |
| | Author | Steven Harringtons |
| | Publisher | McGraw Hill |
| | Edition | 2 nd Edition, 1987 |
| 5. | Title | Schaum's outline of Computer Graphics |
| | Author | Zhigang Xiang, Roy A. Plastock |
| | Publisher | McGraw Hill |
| | Edition | 2 nd Edition, 2000 |
| Content | Unit - 1 OVERVIEW OF GRAPHICS SYSTEM: Input devices, Output primitives, Video display devices, Raster and vector graphics, line-circle-ellipse generating algorithm, filled area primitives. | |
| | Unit - 2 TRANSFORMATIONS AND PROJECTIONS: 2D Transformation, 3D transformation, Parallel projection, Perspective projection. | |
| | Unit - 3 LINE CLIPPING: Cohen-Sutherland, Liang Barsky, Polygon clipping: Sutherland Hodgeman & Weiler-Atherton polygon clipping. | |
| | Unit - 4 CURVES & SURFACES: Conics-Parametric forms for circle, ellipse, parabola; Bezier Curves, Bernstein polynomials, Convex Hull property, B-Spline Curves: Knot vectors uniform and open uniform curves, Periodic B-splines, Uniform B-splines, Non-uniform, rational B-splines, subdividing curves. | |
| | Unit - 5 HIDDEN SURFACE REMOVAL: Hidden Surface Removal: Back face removal, Floating Horizon method for curved objects, Z-Buffer or depth buffer algorithm, Painter's algorithm (Depth sorting method), Binary space partitioning trees, Scan line algorithm, Warnock's algorithm (Area subdivision method). | |

| Course no: CSL371 | Open course (YES/NO) | HM Course (Y/N) | DC (Y/N) | DE (Y/N) | |
| | | | | | |
| Type of course | Open elective | | | | |
| Course Title | Advances in algorithm | | | | |
| Course Coordinator | | | | | |
| Course objectives: | Algorithm design and analysis is a fundamental and important part of computer science. The development of a sound theoretical understanding of advanced algorithms and practical problem solving skills using them. The emphasis will be on approximation algorithms. | | | | |
